

Lab: PhET Sugar and Salt Solutions

Name:

Date:

Class:

This lab is a computer-simulation-based activity. The simulation requires Java and may not run on all computers. If it won't run on student machines the activity can be done by showing the simulator using a computer-projection system. The simulator is available for download at <https://phet.colorado.edu/en/simulation/legacy/sugar-and-salt-solutions>. Or, perhaps more easily accessed by performing a search for "PhET Sugar and Salt".

Background

Sugar and salt both dissolve easily in water and they look a lot alike. There is an important difference between them, though. Salt is an ionic compound made up of two kinds of ion: sodium ions (Na^+) and chloride ions (Cl^-). Sugar is a molecular compound made of one kind of molecule: $\text{C}_{12}\text{H}_{22}\text{O}_{11}$.

Though it looks the same to the naked eye when you add a spoonful of either of these substances to water, what happens to the ions or molecules is quite different. The ions of the salt separate and become surrounded by water molecules. The chemical formula of salt is broken in half and instead of having just one kind of thing dissolved in the water there are two, a positive ion and a negative ion. See the image at right.

When sugar dissolves the molecules separate from each other but the chemical formula stays together. There is just one kind of thing dissolved in the water and it is neutrally charged. See the image at right.

Ionic compounds are also called **electrolytes**. An electrolyte is a material which breaks up into ions when it dissolves in water. When electrolytes dissolve in water they cause the water to be able to conduct electricity. Molecular compounds are usually **non-electrolytes**. A non-electrolyte is a material that dissolves in water as whole molecules: no ions are produced and the water does not gain the ability to conduct electricity.

Questions

Put the conductivity tester into the water in the simulator on the "Macro" tab.

1. What happens when you add salt to the water? How does it change as you add more and more salt?

The light bulb illuminates. with less the light is dim

with more the light is bright.

2. What does "concentration" mean? Refer to the graph in the upper-right corner of the sim.

concentration is the amount of solute in a mixture

3. Reset All using the button in the lower-right corner. What happens when you add sugar to the water? How does it change as you add more sugar?

there is no change. the light stays off entire time. does not change with amount of solute

4. Reset All again. Add all of the salt. What changes when you drain water out? Explain.

the light remains on and un changing.

5. Reset All again. Add all of the salt. What changes when you add water? Explain.

nothing changes. light stays off

6. Reset All again. Add all of the salt. What changes when you evaporate water out? Explain.

the light gets brighter

Salt dissolving in water. The salt ions are positive and negative. The water molecules have one large oxygen atom and two small hydrogen atoms.

Sugar dissolving in water. The sugar molecules are the large groups of atoms. The molecules in the solid are stuck together but the dissolved sugar molecules move separately while remaining whole sugar molecules.

may allow us to constrain theoretical models of Europa's subsurface structure. Meanwhile, since the time of the Voyagers, there has been a revolution in our understanding of the limits of life on Earth. Life has been detected thriving in environments previously thought to be untenable: around hydrothermal vent systems on the seafloor, deep underground in basaltic rocks, and within polar ice. Elsewhere in the solar system, including on Europa, environments thought to be compatible with life as we know it on Earth are now considered possible or even probable. Spacecraft missions are being planned that may be capable of proving their existence. Against this background, the Space Studies Board charged its Committee on Planetary and Lunar Exploration (COMPLEX) to perform a comprehensive study to assess current knowledge about Europa, outline a strategy for future spacecraft missions to Europa, and identify opportunities for complementary Earth-based studies of Europa. See the preface for a full statement of the charge.
