Hormonal Regulation of Development III Richard P. Pharis,David M. Reid,2012-12-06 R P PHARIS and D M REID The idea of a separate Encydopedia volume dealing with the interrelations of plant hormones with factors in the environment of the plant and its organs and tissues originated with N P KEFFORD and we are most appreciative of the help and advice provided by Prof KEFFORD in the formative stages of this volume We have thus interpreted environment very broadly to indude not only factors external to the plant e g gravity light temperature wind mechanieal wounding water organism s induding pollen and magnetic and electric stimuli but internal factors as well e g nutrients both inorganic and photoassimilate direction and time In our definition of hormonal effect or hormonal involvement we have asked our authors to take a broad ap proach and to examine not only phenomena that are mediated by the known plant hormones but to discuss as well a wide variety of processes and events where hormonal involvement is implied through more indirect analyses and observations The volume begins with environmental factors internal to the plant R J WEAVER and J O JOHNSON thus examine hormones and nutrients their inter relationship in movement accumulation and diversion As one

studies a plant during its rapid growth phase and later as maturation and aging proceed it becomes apparent that time is an environmental cue of great significance one which may exert a major influence via hormonal messages
