

FRONT TO REAR AXLE RATIO

TZ18/22/25DA

IMPORTANT: On tractors equipped with FWD (Front Wheel Drive) the front to rear axle ratio 1.497:1 is critical and must be maintained for safe and efficient use of the tractor. This ratio applies to all available tire options. Following is a list of problems that may occur if the front to rear axle ratio is not maintained:

- Engine will lug down or stall when operating on hard surfaces.
- The front wheel drive lever will not remain in the engaged position, or is difficult to disengage.
- Failure of the driveline gears.
- Failure of the front axle, ring and pinion gears.
- Premature tire wear.

To calculate the front to rear axle ratio, use method 1 or method 2.

Method 1:

7. Obtain a measurement from the center of the front axle to the ground (Distance A), and center of the rear axle to the ground (Distance B).
8. Divide Distance B by Distance A to calculate the front to rear axle ratio. ("B" ÷ "A" = Front to rear ratio.)
9. To change the front to rear ratio, increase or decrease the tire inflation pressure.

NOTE: Do not exceed the tire inflation pressures recommended in the Operators Manual. Consult the Operators Manual for the available tire sizes for a specific tractor.
