Mathematical Enculturation Alan Bishop, 2012-12-06 Mathematics is in the unenviable position of being simultaneously one of the most important school subjects for today's children to study and one of the least well understood. Its reputation is awe-inspiring. Everybody knows how important it is and everybody knows that they have to study it. But few people feel comfortable with it so much so that it is socially quite acceptable in many countries to confess ignorance about it to brag about one's incompetence at doing it and even to claim that one is mathophobic. So are teachers around the world being apparently legal sadists by inflicting mental pain on their charges? Or is it that their pupils are all masochists enjoying the thrill of self-inflicted mental torture? More seriously, do we really know what the reasons are for the mathematical activity which goes on in schools? Do we really have confidence in our criteria for judging what's important and what isn't? Do we really know what we should be doing? These basic questions become even more important when considered in the context of two growing problem areas. The first is a concern felt in many countries about the direction which mathematics education should take in the face of the increasing presence of computers and calculator-related technology in society. **Internet of**

Things (IoT): Key Digital Trends Shaping the Future Rajiv Misra, Muttukrishnan Rajarajan, Bharadwaj Veeravalli, Nishtha Kesswani, Ashok Patel, 2023-07-24 The book is a collection of high quality research papers presented at 7th International Conference on Internet of Things and Connected Technologies ICIoTCT 2022 held at Indian Institute of Technology IIT Patna Bihar India during 29-30 September 2022. This book presents recent advances on IoT and connected technologies. This book is designed for marketing managers, business professionals, researchers, academicians and graduate level students seeking to learn how IoT and connecting technologies increase the amount of data gained through devices, enhance customer experience and widen the scope of IoT analytics in enhancing customer marketing outcomes.

High Performance Scientific And Engineering Computing Michael Breuer, Franz Durst, Christoph

Zenger, 2012-12-06 In Douglas Adams book Hitchhiker's Guide to the Galaxy hyper intelligent beings reached a point in their existence where they wanted to understand the purpose of their own existence and the universe They built a supercomputer called Deep Thought and upon completion they asked it for the answer to the ultimate question of life the universe and everything else The computer worked for several millennia on the answers to all these questions When the day arrived for hyper intelligent beings to receive the answer they were stunned shocked and disappointed to hear that the answer was simply 42 The still open questions to scientists and engineers are typically much simpler and consequently the answers are more reasonable Furthermore because human beings are too impatient and not ready to wait for such a long period high performance computing techniques have been developed leading to much faster answers Based on these developments in the last two decades scientific and engineering computing has evolved to a key technology which plays an important role in determining or at least shaping future research and development activities in many branches of industry Development work has been going on all over the world resulting in numerical methods that are now available for simulations that were not foreseeable some years ago However these days the availability of supercomputers with Teraflop performance supports extensive computations with technical relevance A new age of engineering has started
