Fire Protection Hydraulics and Water Supply William F. Crapo,2015-12-03

Fire service pump operators must have an understanding of the many laws of science that govern the study of hydraulics and water supply in order to be able to handle the complex hydraulic problems that may arise in real world scenarios

The third edition of *Fire Protection Hydraulics and Water Supply* effectively teaches hydraulics by systematically addressing the underlying science in a way that makes challenging subject matter easier to understand and retain

Readers will be introduced to the basic properties of water and

laws of hydraulics and friction loss before learning to apply formulas to calculate flow friction loss nozzle reaction and more. Additionally, readers will progress to learn about complex principles of pump operation including conditions such as end thrust and radial hydraulic balance, the application of Newton's first law of motion as it applies to a kinetic energy pump, and the concept of enthalpy. Various laws of physics including Pascal's Principle, Bernoulli's Principle, and the Continuity Equation are also covered.

Standpipe Systems for Fire Protection Kenneth E. Isman, 2016-12-19 This important new manual goes beyond the published NFPA standards on installation of standpipe systems to include the rules in the International Building Code, municipal fire codes, the National Fire Code of Canada, and information on inspection, testing, and maintenance of standpipe systems. Also covered are the interactions between standpipe and sprinkler systems, since these important fire protection systems are so frequently installed together. Illustrated with design examples and practical applications to reinforce the learning experience, this is the go-to reference for engineers, architects, design technicians, building inspectors, fire inspectors, and anyone that inspects, tests, or maintains fire protection systems. Fire marshals and plan review authorities that have the responsibility for reviewing and accepting plans and hydraulic calculations for standpipe systems are also an important audience, as are firefighters who actually use standpipe systems. As a member of the committees responsible for some of these documents, Isman also covers the rules of these standards and codes as they are written, but also provides valuable insight as to the intent behind the rules. A noted author and lecturer, Professor Isman was an engineer with the National Fire Sprinkler Association. NFSA is an elected Fellow of the Society of Fire Protection Engineers (SFPE) and currently Clinical Professor in the Department of Fire Protection Engineering at the University of Maryland.

Fire Apparatus Driver/Operator: Pump, Aerial, Tiller, and Mobile Water Supply IAFC, 2018-04-16 The National Fire Protection Association (NFPA) and the International Association of Fire Chiefs (IAFC) are pleased to bring you *Fire Apparatus Driver/Operator: Pump, Aerial, Tiller, and Mobile Water Supply*, Third Edition. This third edition of *Fire Apparatus Driver/Operator* has been thoroughly updated to serve as a complete training solution that addresses pump operation, safe driving techniques, tiller and aerial apparatus operation, and water supply considerations. From basic apparatus maintenance to fire pump theory and advanced hydraulic calculations, this single manual covers everything a fire service driver/operator needs to know. *Fire Apparatus Driver/Operator: Pump, Aerial, Tiller, and Mobile Water Supply*, Third Edition meets and exceeds the job performance requirements (JPRs) of Chapters 4, 5, 6, 7, and 10 of the 2017 Edition of NFPA 1002, *Fire Apparatus Driver/Operator Professional Qualifications*. In the 2017 edition, the requirement that a Driver/Operator be certified to the Fire Fighter I level was removed. However, JPRs from NFPA 1001, *Standard for Fire Fighter Professional Qualifications*, have been added so driver/operators who operate pumpers and mobile water supply apparatus are able to operate outside of the immediate dangers to life and health (IDLH) but still have an understanding of the following Fire Fighter I topics: Fire Department Communications (NFPA 1001 5.2.1, 5.2.2, 5.2.3), The General Knowledge Requirements (NFPA 1001 5.1.1), Responding on an Apparatus to an Emergency Scene (NFPA 1001 5.3.2).

Connect a Fire Department Pumper to a Water Supply NFPA 1001 5 3 15 Additional appendices include the excerpt of NFPA 1002 and corresponding correlation matrixes to substantiate all JPRs that are covered and documented Comprehensive and updated content in this edition includes Nozzle reaction and how to calculate it Expanded coverage of pump anatomy and pressure control devices Content that addresses vital parts of NFPA 1901 Standard for Automotive Fire Apparatus and NFPA 1911 Standard for the Inspection Maintenance Testing and Retirement of In Service Automotive Fire Apparatus Appendix A Daily Weekly Inspection Check Sheet that provides a comprehensive overview on what to inspect and how to ensure your apparatus is at operational readiness

Liquid Natural Gas in the United States John Hrstar, 2014-06-24 When natural gas was first discovered in Appalachia in the 19th century its development as a fuel was rapid Unlike oil and coal gas could be moved only by pipeline and required large containers for storage It was not possible to cope with peak loads without adding excessive pipeline capacity until just before World War II when two sister gas companies developed a plant to liquefy and store natural gas as a liquid the liquid was then regasified to deal with peak loads The liquid is 1 600 the volume of the gas but it requires storage at an extremely low temperature 1 260 F This worked well until 1944 when a liquid natural gas LNG tank in Cleveland ruptured and caused a fire with 130 fatalities The fire did not end the industry but caused it to pause Over the next few years the problems in materials design standards and siting were solved The recognition that liquefaction made LNG transportable without a pipeline was the breakthrough In 1959 a shipload of LNG went from Louisiana to Britain and restarted the LNG industry It is now a major worldwide energy industry
