Modern Methods of Construction and Innovative Materials Arthur Lyons, 2024-04-01 This new textbook has two main themes. The first is Modern Methods of Construction MMC which is the off site manufacture of a wide spectrum of products ranging from whole buildings to be transported onto site down to smaller units or components for site integration. The second theme describes the innovation and progress towards carbon zero by the major generators of CO2 in the construction industry namely cement, steel and masonry. The first section of the book describes and illustrates with photographs the major forms of Modern Methods of Construction. These include fully completed 3D units, panelised systems, pods, sub assemblies and on site MMC. The section on Innovative Materials then describes a wide range of construction products which are entering into the built environment sector. Some new entrants are variants on well established construction materials such as steel and concrete. Materials such as these will remain major construction materials for the foreseeable future but their composition and manufacturing processes will inevitably have to change. Timber also will remain a major construction material but sustainable sourcing is key and its utilisation as cross lamination timber CLT or as modified timber is rapidly developing. As a result students and practitioners must familiarise themselves with these materials, their composition and various uses. The book goes on to describe variants of other traditional building products such as glass, plastic and insulation which are undergoing major developments leading towards enhanced environmental sustainability as well as many emergent materials some of which are likely to be significant in future. Modern Methods of Construction and Innovative Materials is the only book combining these important elements of the future of the industry in an easy to read guide for students and new practitioners. It is essential reading for anyone studying and working in the built environment be they architects, construction managers, surveyors or engineers.

Planning Law and Practice in Northern Ireland Stephen McKay, Michael Murray, 2022-10-24 Each of the jurisdictions within the United Kingdom is constantly refining the operational characteristics of its planning system and while there are some common practices there are also substantive divergences. In each territory the planning template is shaped within a dynamic political and legal context and thus students and practitioners require an accessible in depth and up to date literature dealing with this matter. The multi disciplinary contributors to this expanded Second Edition of Planning Law and Practice in Northern Ireland explore the progression of planning within the region and discuss prominent facets of contemporary development management, development plans, environmental law, property law and professional practice. Consideration is given to the consequences of Brexit for planning in Northern Ireland, devolved government institutional structures for planning and the post 2015 emergent performance of local authorities in this arena. The book makes an important contribution to the wider literature in this field and with its extensive citing of statutes and cases provides an essential resource for students, planning practitioners and researchers.
