Pharmaceutics Book By M U Aulton:

Aulton's Pharmaceutics E-Book Kevin M.G. Taylor, Michael E. Aulton, 2013-07-29 Pharmaceutics is one of the most diverse subject areas in all of pharmaceutical science. In brief, it is concerned with the scientific and technological aspects of the design and manufacture of dosage forms or medicines. An understanding of pharmaceutics is therefore vital for all pharmacists and those pharmaceutical scientists who are involved with converting a drug or a potential drug into a medicine that can be delivered safely, effectively, and conveniently to the patient. Now in its fourth edition, this best-selling textbook in pharmaceutics has been brought completely up to date to reflect the rapid advances in delivery methodologies by eye and injection, advances in drug formulations and delivery methods for special groups such as children and the elderly, nanomedicine, and pharmacogenosy. At the same time, the editors have striven to maintain the accessibility of the text for students of pharmacy, preserving the balance between being a suitably pitched introductory text and a clear reflection of the state of the art. New to this edition: New editor Kevin Taylor, Professor of Clinical Pharmaceutics, School of Pharmacy, University of London. Twenty-two new contributors. Six new chapters covering parenteral and ocular delivery design and administration of medicines for the children and elderly, the latest in plant medicines, nanotechnology, and nanomedicines, and the delivery of biopharmaceuticals. Thoroughly revised and updated throughout, it provides a logical, comprehensive account of drug design and manufacture, including the science of formulation and drug delivery, designed and written for newcomers to the design of dosage forms. New to this edition: New editor Kevin Taylor, Professor of Clinical Pharmaceutics, School of Pharmacy, University of London. Twenty-two new contributors. Thoroughly revised and updated throughout. [Aulton's Pharmaceutics E-Book](#) Kevin M.G. Taylor, Michael E. Aulton, 2021-04-23 The essential pharmaceutics textbook. One of the world's best-known texts on pharmaceutics, Aulton's Pharmaceutics offers a complete course in one book for students in all years of undergraduate pharmacy and pharmaceutical sciences degrees. Thoroughly revised, updated, and extended by experts in their fields and edited by Professors Kevin Taylor and Michael Aulton, this new edition includes the science of formulation, pharmaceutical manufacturing, and drug delivery. All aspects of pharmaceutics are covered in a clear and readily accessible way and extensively illustrated throughout, providing an essential companion to the entire pharmaceutics curriculum from day one until the end of the course. Fully updated throughout with the addition of new chapters to reflect advances in formulation and drug delivery science, pharmaceutical manufacturing, and medicines regulation. Designed and written for newcomers to the design and manufacture of dosage forms. Relevant pharmaceutical science covered throughout. Includes the science of formulation and drug delivery. Reflects current practices and future applications of formulation and drug delivery science to small drug molecules, biotechnology products, and nanomedicines. Key points boxes throughout. Over 400

online multiple choice questions **Essentials of Pharmaceutical Preformulation** Simon Gaisford, Mark Saunders, 2012-10-22 Essentials of Pharmaceutical Preformulation is a study guide which describes the basic principles of pharmaceutical physicochemical characterisation Successful preformulation requires knowledge of fundamental molecular concepts solubility ionisation partitioning hygroscopicity and stability and macroscopic properties physical form such as the crystalline and amorphous states hydrates solvates and co crystals and powder properties familiarity with the techniques used to measure them and appreciation of their effect on product performance recognising that often there is a position of compromise to be reached between product stability and bioavailability This text introduces the basic concepts and discusses their wider implication for pharmaceutical development with reference to many case examples of current drugs and drug products Special attention is given to the principles and best practice of the analytical techniques that underpin preformulation UV spectrophotometry TLC DSC XRPD and HPLC The material is presented in the typical order that would be followed when developing a medicine and maps onto the indicative pharmacy syllabus of the Royal Pharmaceutical Society of Great Britain Undergraduate level pharmacy students and R D analytical scientists working in the pharmaceutical sector with or without a pharmaceutical background will find this text easy to follow with relevant pharmaceutical examples Essential study guide for pharmacy and pharmaceutical science students Covers the pharmaceutical preformulation components of the Royal Pharmaceutical Society of Great Britain s indicative syllabus Easy to follow text highlighted with relevant pharmaceutical examples Self assessment assignments in a variety of formats Written by authors with both academic and industrial experience Companion website with further information to maximise learning Flavors for Nutraceutical and Functional Foods M.
