Pediatric patients are a unique subset of emergency patients making up about one quarter of all emergency department visits. Textbooks regarding the care of pediatric patients are almost universally organized by organ system which does not facilitate an efficient diagnosis. Taking a case-based approach, *Pediatric Emergency Medicine: Chief Complaints and Differential Diagnosis* is arranged by chief complaint using real patient scenarios to help the reader work through the inductive and deductive reasoning needed to assess, evaluate, treat, and disposition pediatric patients with urgent complaints. Cases are structured in the way in which they are presented during medical care, allowing practitioners to become comfortable with the general structure of case presentations: chief complaint, HPI, PMH, ROS, exam, and ancillary studies. This volume also discusses disease processes and their differentiations, providing in-depth knowledge regarding current standards of diagnosis and care.

Pediatric Hospital Medicine Ronald M. Perkin, Dale A. Newton, James D. Swift, 2008. Now in its Second Edition, this text focuses exclusively on the management of hospitalized pediatric patients from admission to discharge. It is an excellent resource for residency programs, hospitalist fellowships, and continuing education for physicians whose practice includes the management of hospitalized newborns and children. Because pediatric hospital care is provided by a wide variety of healthcare professionals and in many different hospital settings, this text provides a framework for unified management and effective and efficient care. This edition includes new sections on emergency medicine and psychiatric hospitalization and expanded coverage of management of children with complex and chronic conditions.
