The emphasis is on what administrators will need to know to perform key server support and management tasks. Coverage of the systemd service management system is integrated into the book. Topics covered include software management, systemd service management, systemd networkd, Netplan network configuration, and Ubuntu cloud services. Windows shares, Network support servers, and applications covered include the Squid proxy server, the Domain Name System, BIND server, DHCP, distributed network file systems, nftables, firewalls, and cloud computing. The book is organized into five parts: getting started, services, shared resources, network support, and shells. Part 1 focuses on basic tasks such as installing the Ubuntu Live Server, configuring networking with Netplan, systemd, networkd, and NetworkManager, managing software from the Ubuntu Snap and APT repositories, and basic usage for the desktop and the command line interfaces. Part 2 examines Internet servers as well as how services are managed by systemd using unit files. Configuration and implementation of the Postfix mail server, the vsftpd FTP server, the Apache Web server, as well as news and database servers are covered in detail. Part 3 deals with servers that provide shared resources on a local network or the Internet. Services examined include the CUPS printing server, NFS, Linux network file server, and Samba. Windows file and printing server clustering and cloud computing services supported by Ubuntu. Part 4 covers servers that provide network support like the Squid proxy server, the Bind Domain Name System, DNS server, DHCP servers, and the nftables firewall along with the configuration firewall tools, FirewallD and UFW. IPtables is included for reference. Key networking operations are also examined like IPv6 auto configuration, TPC, IP networking, and network monitoring tools. Part 5 provides a review of shell commands including those used for managing files as well as shell scripts, variables, and configuration files.
