Resilience Thinking In Urban Planning Geojournal Library:

Resilience Thinking in Urban Planning Ayda Eraydin, Tuna Taşan-Kok, 2012-11-29 There is consensus in literature that urban areas have become increasingly vulnerable to the outcomes of economic restructuring under the neoliberal political economic ideology. The increased frequency and widening diversity of problems offer evidence that the socio economic and spatial policies planning and practices introduced under the neoliberal agenda can no longer be sustained. As this shortfall was becoming more evident among urban policymakers planners and researchers in different parts of the world a group of discontent researchers began searching for new approaches to addressing the increasing vulnerabilities of urban systems in the wake of growing socio economic and ecological problems. This book is the joint effort of those who have long felt that contemporary planning systems and policies are inadequate in preparing cities for the future in an increasingly neoliberalising world. It argues that resilience thinking can form the basis of an alternative approach to planning. Drawing upon case studies from five cities in Europe namely Lisbon Porto Istanbul Stockholm and Rotterdam the book makes an exploration of the resilience perspective raising a number of theoretical debates and suggesting a new methodological approach based on empirical evidence. This book provides insights for intellectuals exploring alternative perspectives and principles of a new planning approach.

Handbook on Planning and Complexity Gert de Roo, Claudia Yamu, Christian Zuidema, 2020-06-26 This Handbook shows the enormous impetus given to the scientific debate by linking planning as a science of purposeful interventions and complexity as a science of spontaneous change and non linear development. Emphasising the importance of merging planning and complexity this comprehensive Handbook also clarifies key concepts and theories presents examples on planning and complexity and proposes new ideas and methods which emerge from synthesising the discipline of spatial planning with complexity sciences.

Participatory Research and Planning in Practice Janez Nared, David Bole, 2019-11-14 This open access book provides in depth insights into participatory research and planning by presenting practical examples of its use. In particular it describes theoretical and methodological aspects of participatory research and planning as well as the implementation of participatory processes in fields such as transport planning cultural heritage management environmental planning and post earthquake recovery. Further it compares participatory planning experiences from different territorial levels from the macro regional e.g. Southeastern Europe Mediterranean or European metropolitan regions to national regional and local levels. The book will help researchers planners public administration officials decision makers and the general public to understand the advantages disadvantages and constraints of participatory planning and research. Using various examples it will guide readers through the theory of participatory planning and research its methods and different perspectives on how to use it in practice.

far religion has been seen as cause for dramatic developments in the history of cities it has contributed to the monumentalisation of centres and or has given importance to ex centric places Very recently anthropologists have been discovering religion in the contemporary global city But still awaiting historical investigation is the specific urban character of religious ideas practices and institutions and the role of urban space shaping this very religion in the course of history The time span from the Hellenistic age to Late Antiquity was crucial in the establishment of concepts and institutions of religion and witnessed extended waves of urbanisation Rome being central to this In addressing this problem this book fills a significant gap in the scholarship on urban religion across time Taking seriously the proposition that space is condition medium and outcome of social relations the development of urban religion in lived urban space and urban culture or urbanity offers a lens onto processes of religious change that have been neglected for the history of religion and for the study of urbanism The key thesis is that city space engineered the major changes that revolutionised religions This stimulating book makes use of archaeology and history to address religion as an essential component of urban life in both the past and the present With a strong basis in the ancient Mediterranean as well as an insightful view of modern urban life R pke emphasizes that the practice and performance of religion at the everyday level is as essential in the creation of an urban ethos as the grand temples and institutions promulgated by the elite Monica L Smith author of Cities The First 6 000 Years J rg R pke offers a characteristically original and learned series of reflections on some of the many ways in which the history of religions and the history of cities might be entangled Urban Religion offers no single overarching thesis but it is consistently thought provoking and suggests many intriguing lines of investigation for the future Greg Woolf Institute of Classical Studies London
