

Media Violence Effects on Children, Adolescents and Young Adults

By CRAIG A. ANDERSON, MA, PhD

I killed my first Klingon in 1979. It took place in the computer center at Stanford University, where I was playing a new video game based on the Star Trek television series. I was an "early adopter" of the new technology of video games, and continued to be so for many years, first as a fan of this entertainment medium, and later as a researcher interested in the question of what environmental factors influence aggressive and violent behavior.

Of course, like most young men and women of that era, I had grown up witnessing thousands of killings and other acts of aggression in a wide array of television shows and films. Today's youth are even more inundated with media violence than past generations, mostly from entertainment sources but also from news and educational media. And even though the public remains largely unaware of the conclusiveness of more than six decades of research on the effects of exposure to screen media violence, the scientists most directly involved in this research know quite a bit about these effects.

The briefest summary of hundreds of scientific studies can be boiled down to two main points. First, exposure to media violence is a causal risk factor for physical aggression, both immediately after the exposure and months, even years, later. Second, in the absence of other known risk factors for violence, high exposure to media violence will not turn a normal well-adjusted child or adolescent into a mass killer.

SOME DEFINITIONS

One reason for much of the confusion and debate among even highly educated citizens, health care professionals and even a few scientists is that when media violence researchers use certain terms and concepts, they have somewhat different meanings than when the general public uses the same words.

By "aggression," researchers mean "behavior that is intended to harm

another person who does not wish to be harmed." Thus, hitting, kicking, pinching, stabbing and shooting are types of physical aggression.

Playing soccer or basketball or even football with energy and confidence are not usually considered acts of aggression, even though that is what most coaches mean when they exhort their charges to "play aggressively." Somehow, the phrase "play assertively" doesn't have the same ring to it.

By "violent behavior," most modern aggression and violence scholars mean "aggressive behavior (as defined above) that has a reasonable chance of causing harm serious enough to require medical attention." Note that the behavior does not have to actually cause the harm to be classified as violent; shooting at a person but missing still qualifies as a violent behavior.

By "media violence" we mean scenes and story lines in which at least one character behaves aggressively towards at least one other character, using the above definition of "aggression," not the definition of "violence." Thus, television shows, movies, and video games in which characters fight (Power Rangers, for example), or say mean things about each other (often

On Media Violence W. James Potter, 1999-09-10 On Media Violence is a definitive examination of this hotly debated social topic Media scholar W James Potter asks provocative questions such as How much media violence is there What are the meanings conveyed in the way violence is portrayed What effect does it have on viewers individually as members of particular groups and as members of society The book is organized in four parts The first part presents a thorough review of more than 40 years of research and theories about media violence The second part is an extended critique of the assumptions and practices of that research and thinking The book proposes re conceptions of definitions of violence context levels of phenomena the role of human development effects risk and the nature of the media industries Potter also addresses the necessity for a reconfiguration of the methodological tasks used to assess the content and effects of media violence The final part introduces Lineation Theory a suggested perspective and new theoretical approach explaining it On Media Violence is essential reading for students and scholars of Media Studies Communication Theory Popular Culture Social Psychology and Sociology Part I of the book offers a thorough review of more than 40 years of research on media violence Part II proposes re conceptions of these theories focusing in particular on violence context levels of phenomena human development effects risk and the media industries In the latter half of the book Part III addresses the necessity for a reconfiguration of the methodological tasks used to assess media violence Part IV

introduces the concept of Lineation Theory a suggested perspective for thinking about media violence and a new theoretical approach to explaining it On Media Violence is essential reading for students and scholars of Media Studies Communication Theory Popular Culture Social Psychology and Sociology Does Media Violence Cause Violence? Syed Hassan Zulfiqar,2021-03-23 The existing literature is indicative of the fact that violence has been rooted in the mass media like never before and with the growing advancement technological advancement children and adolescents spend considerable amount of time exposed to such violence through various sources of media In order to address this growing concern this study analyses the impact of media violence exposure on the development of aggressive feelings thoughts and behavior in children and youth The content analysis of TV shows movies and video games as most commonly used sources of media have been analyzed along with the studies that show rapid increase in violent behavior after being exposed to virtual violence It also explores the neurophysiological perspectives by analysing the consequences of exposure to violent media on adolescents brain through neuroimaging Although limited research has been conducted in this field but the empirical evidence demonstrates an alteration in the prefrontal mechanisms after exposure to violent media that are responsible for controlling emotion and behavior leading to aggression Based on the current longitudinal research it is also observed that excessive exposure to media violence makes the youth less emotional and desensitized towards real life violence which ultimately leads to aggressive behavior and have negative long term effects on the brain Future research should integrate other risk factors and research paradigms in order to have a more comprehensive picture with continuous development in next generations media technology and changing horizons of violence **Media Violence and Aggression** Tom Grimes,James A. Anderson,Lori Bergen,2008 Counters the claim that media violence leads to widespread social aggression Dispelling this myth through a multiple method analysis this work argues that there are indeed media effects that derive from media violence pornography and other kinds of visual cyberspace and print based messages **Media Violence and its Effect on Aggression** Jonathan L. Freedman,2002-12-15 The scientific evidence does not support the notion that TV and film violence cause aggression in children or in anyone else So argues Jonathan Freedman based on his findings that far fewer than half of the scientific studies have found a causal connection between exposure to media violence and aggression or crime In fact Freedman believes that taken to a more controversial extreme the research could be interpreted as showing that there is no causal effect of media violence at all Media Violence and its Effect on Aggression offers a provocative challenge to the accepted norms in media studies and psychology Freedman begins with a comprehensive review of all the research on the effect of violent movies and television on aggression and crime Having shown the lack of scientific support for the prevailing belief that media violence is connected to violent behaviour he then explains why something that seems so intuitive and even obvious might be incorrect and goes on to provide plausible reasons why media violence might not have bad effects on children He contrasts the supposed effects of TV violence on crime with the known effects of poverty and other social factors

and discusses the difference between television advertising which he argues does have an effect and violent programs which do not Freedman concludes by noting that in recent years television and films have been as violent as ever and violent video games have become more and more popular yet during this period there has been a dramatic decrease in violent crime He argues that this makes it highly implausible that media violence causes aggression or crime
