

Engineering research project: literature review

What is a literature review?

Literature = scholarly publications which have been written on a particular topic, such as journal articles, research reports, government reports and text books.

The review = the careful selection of literature relevant to your topic and the presentation, interpretation, classification and evaluation of this literature.

Why do a literature review?

Your literature review becomes an essential link in your research project:

- The literature review provides the reader with all the important background information needed to understand your project.
- It places your project as one link in a chain of research that is developing knowledge in your field.
 - To understand where you are going, it is important to understand what came before you.
- It demonstrates to the reader that you are aware of up-to-date and important knowledge on your topic
- It may also be used to justify or provide a rationale for your research question, your research framework or your methodology

A literature review is NOT ...

- **An annotated bibliography**
 - In an annotated bibliography the writer presents a summary and critical evaluation of each article or scholarly resource, one by one.
 - There little or no connection made between the various articles or resources.
- **An essay**
 - Essays and literature reviews have a very different purpose and require different approaches.
 - In an essay a student is given a topic to discuss or a question to answer and the writing is organised around responding to that topic or question.
 - The essay progresses in a linear way, where the student presents his/her first point, followed by an explanation which is supported by the literature.
 - The student then moves on to the second point and so on.
 - So in an essay the literature has a supporting role, whereas in a literature review it is the literature itself which is the subject of discussion.
