[Trees of New England Field Guide](#) Stan Tekiela, 2024-09-03 Learn to identify trees in the Northeast with this handy field guide organized by leaf type and attachment. Make tree identification simple, informative, and productive with the field guide by award-winning author and naturalist Stan Tekiela. There's no need to look through dozens of photos of trees that don't grow in New England. Learn about 117 species found in the states of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont: every native tree plus common non-natives, organized by leaf type and attachment. Just look at a tree's leaves, then go to the correct section to learn what it is. Fact-filled information contains the particulars that you want to know, including special sections about fall colors and leaf peeping. While full-page photographs provide the visual detail needed for accurate identification, so grab the *Trees of New England Field Guide* for your next outing to help ensure that you positively identify the trees that you see. **Book Features:** 117 species. Every native tree plus common non-natives. Easy to use. Thumb tabs show leaf type and attachment. Compare feature. Decide between look-alikes. Stan's Notes. Naturalist tidbits and facts. Professional photos. Crisp, stunning full-page images. **Trees of New England** Dan Ogrzydziak, 2013-06-23 The main body of *Trees of New England* consists of 19 ink drawings of trees common to the Pioneer Valley of Massachusetts, southern Vermont, and southern New Hampshire. My motivation came from the lack of leaf images with sufficient quality to do key-driven tree identification. The use of leaf keys is

a means to train the eye for details relevant to distinguishing species well beyond the 19 found in this book In general detail found in commercial field guides is limited and the higher quality older etchings are difficult to find and ornate in style It might seem that this need could be fully realized through the Internet but for learning tree identification by key the Internet has its own limitation Each of the 19 drawings is an attempt to produce a realistic image with a focus on identifiable features All the images were produced from multiple samples with an eye to capturing an archetypal representation of the species The aesthetic was to create a precise unembellished series of drawings in which the beauty of nature s designs would be manifest
