Release Eric O. Freed,2013-07-12 Over the past decade enormous progress has been made in understanding the late events
in the HIV replication cycle This has been made possible by major advances in cell biology virology and structural biology
The field continues to move forward rapidly with important new discoveries being reported on a regular basis The impact of
this progress across a broad spectrum of biomedical research has been substantial The increase in basic knowledge in the
areas of HIV assembly release and maturation has been accompanied by new possibilities for therapeutic intervention The
work includes topics relating to basic molecular biology cell biology and structural biology of HIV assembly coupled with
more applied ideas of how this basic information can inform the field of antiretroviral research The book covers all major
topics pertaining to the late stages of HIV replication with leaders in each area recruited to contribute chapters in their areas
of expertise The topics will be sufficiently focused to allow authors the opportunity to cover the latest developments in detail
