Swansea and Nantgarw Porcelains, Howell G.M. Edwards, 2017-03-27. This book describes a holistic study of the porcelain manufactured at Nantgarw and Swansea in the first quarter of the 19th Century, using both scientific analytical data and historical provenancing. This porcelain is acclaimed as some of the finest and most translucent porcelain ever produced. These two porcelain factories are linked through the artistic and creative activities of the enigmatic William Billingsley, and had a strictly limited production over only three or four years during the period 1812-1820. The earliest chemical analysis of these porcelains was undertaken almost 100 years ago and is compared with the results of more recent analyses. The chemical composition of these porcelains, their artistic decoration, and the struggle to maintain quality production is reviewed. Scientific explanations are proposed for the characteristic Swansea duck egg porcelain translucency and for the Nantgarw iridescence. The book is well illustrated throughout and affords a good basis for the further in-depth study of Swansea and Nantgarw porcelains.

Ceramic Technology for Potters and Sculptors, Yvonne Hutchinson Cuff, 1996. Demonstrates the technology involved in making and firing ceramics.

Nantgarw and Swansea Porcelains, Howell G.M. Edwards, 2018-04-30. This book gives a detailed account of the holistic research carried out on the analytical data obtained historically on the products of the Nantgarw and Swansea porcelain manufactories, which existed for a few years only during the second decade of the 19th Century. A background to the establishment of the two factories, which are linked through the persons of the enigmatic William Billingsley and his kiln manager Samuel Walker, involves the sourcing of their raw materials and problems associated with the manufacture and distribution of the finished products. A description of the minerals and additives used in porcelain production is recounted to set the scene for the critical evaluation of the comprehensive analytical data which have been published on Nantgarw and Swansea porcelains. For the first time, the author has adopted a nondestructive technique, Raman spectroscopy, to interrogate perfect samples of Nantgarw and Swansea porcelain, as well as a selection of shards from an archaeological excavation carried out at a waste dump at the Nantgarw China Works site. Following these experiments, several questions relating to the porcelain bodies of Swansea and Nantgarw china can be

answered and a protocol established for the preliminary evaluation of items of suspect attribution to confirm or not the correctness of their assignment to these Welsh porcelain factories
