Structural Analysis of Historical Constructions Rafael Aguilar, Daniel Torrealva, Susana Moreira, Miguel A.

Pando, Luis F. Ramos, 2018-08-18 This volume contains the proceedings of the 11th International Conference on Structural Analysis of Historical Constructions SAHC that was held in Cusco Peru in 2018 It disseminates recent advances in the areas related to the structural analysis of historical and archaeological constructions The challenges faced in this field show that accuracy and robustness of results rely heavily on an interdisciplinary approach where different areas of expertise from managers practitioners and scientists work together Bearing this in mind SAHC 2018 stimulated discussion on the new knowledge developed in the different disciplines involved in analysis conservation retrofit and management of existing constructions This book is organized according to the following topics assessment and intervention of archaeological heritage history of construction and building technology advances in inspection and NDT innovations in field and laboratory testing applied to historical construction and heritage new technologies and techniques risk and vulnerability assessments of heritage for multiple types of hazards repair strengthening and retrofit of historical structures numerical modeling and structural analysis structural health monitoring durability and sustainability management and conservation strategies for heritage structures and interdisciplinary projects and case studies This volume holds particular interest for all the community interested in the challenging task of preserving existing constructions enable great opportunities and also uncover new challenges in the field of structural analysis of historical and archeological constructions Synchronous data acquisition with wireless sensor networks Funck, Jürgen Helmut, 2018-07-19 Wireless sensor networks WSN are predicted to play a key role in future technological developments like the internet of things Already they are beginning to be used in many applications not only in the scientific and industrial domains One of the biggest challenges when using WSN is to fuse and evaluate data from different sensor nodes Synchronizing the data acquisition of the nodes is a key enabling factor for this So far research has been focused on synchronizing the clocks of the nodes largely neglecting the implications for the actual measurement results This thesis investigates the relation between synchronization accuracy and quality of measurement results Two different classes of time synchronous data acquisition are investigated event detection and waveform sampling A model is developed that describes a WSN as a generic multi channel data acquisition system thus enabling direct comparison to other existing systems With the help of this model it is shown that synchronization accuracy should best be expressed as uncertainty of the acquired timing information This way not only the contribution of the synchronization to the overall measurement uncertainty can be assessed but also the synchronization accuracy required for an application can be estimated The insights from the uncertainty analysis are used to develop two distinct approaches to synchronous data acquisition a proactive and a reactive one It is shown that the reactive approach can also be used to efficiently implement synchronous angular sampling i e data acquisition synchronous to the rotation of a machine s shaft Furthermore testing methods are

suggested that evaluate the synchronized data acquisition of an existing WSN as a whole These methods can be applied to other data acquisition systems without changes thus enabling direct comparisons The practical realization of a WSN is described on which the developed data acquisition methods have been implemented All implementations were thoroughly tested in experiments using the suggested testing methods This way it was revealed that a system's interrupt handling procedures may have a strong influence on the data acquisition Furthermore it was shown that the effective use of fixed point arithmetic enables synchronous angular sampling in real time during a streaming measurement Finally two application examples are used to illustrate the utility of the implemented data acquisition the acoustic localization of two sensor nodes on a straight line and a simple order tracking at an induction motor test bench Diese Dissertation untersucht die Zusammenhänge zwischen Synchronisationsgenauigkeit und Qualität der Messergebnisse Zwei Klassen von zeitsynchroner Datenerfassung werden dabei betrachtet die Detektion von Ereignissen und die Aufnahme von Kurvenformen Es wird ein Modell entwickelt welches ein WSN als ein allgemeines mehrkanaliges Datenerfassungssystem beschreibt Dies ermöglicht den direkten Vergleich zwischen WSN und anderen Messsystemen Weiter wird mit Hilfe des Modells gezeigt dass die Synchronisationsgenauigkeit vorzugsweise als Unsicherheit der Zeitinformation angegeben werden sollte Hierdurch kann nicht nur der Beitrag der Synchronisation zur gesamten Messunsicherheit bestimmt sondern auch die von einer Anwendung tatsächlich benötigte Synchronisationsgenauigkeit abgeschätzt werden Ausgehend von den durch die Unsicherheitsbetrachtung gewonnenen Erkenntnissen werden ein proaktiver und ein reaktiver Ansatz zur synchronen Datenaufnahme entwickelt Mit dem reaktiven Ansatz können Messdaten auch effizient drehwinkelsynchron und synchron zur Drehbewegung einer Maschinenwelle aufgenommen werden Es werden Testverfahren vorgeschlagen mit denen sich die Synchronizität der Datenerfassung für ein WSN als Ganzes überprüfen lässt Diese Verfahren lassen sich unverändert auf andere Messsysteme anwenden und ermöglichen somit direkte Vergleiche Es wird die praktische Umsetzung eines WSN beschrieben auf dem die entwickelten Methoden zur Datenerfassung implementiert wurden Alle Implementierungen wurden mit den vorgeschlagenen Testverfahren untersucht Hierdurch konnte gezeigt werden dass die Interrupt-Bearbeitung der Sensorknoten entscheidenden Einfluss auf die Messdatenerfassung hat Weiter konnte durch den Einsatz von Fixed-Point-Arithmetik die drehwinkelsynchrone Datenerfassung in Echtzeit realisiert werden Schließlich wird die Nutzlichkeit der implementierten Datenerfassung an zwei Anwendungen gezeigt der akustischen Ortung zweier Sensorknoten sowie einer einfachen Ordnungsanalyse

Authentic Reconstruction John Bold, Peter Larkham, Robert Pickard, 2017-12-14 Notions of authenticity lie at the heart of many questions about heritage and identity in the built environment These questions are most pertinent when buildings have been destroyed in disaster or war and the built fabric is being reconstructed to reinstate traditional or historic appearances in place of what was lost Authentic Reconstruction examines this idea of reconstruction using it as a prompt to examine a range of deeper issues on heritage and the built environment From post WWII reconstruction programmes through to the rebuilding of historic cultural landscapes lost in natural disasters this collection of essays by heritage specialists provides a wide range of case studies and discussions Each presents responses to crises and lessons learned in order to extrapolate general guidelines for future actions by politicians architects and planners in reconstructing buildings The book also looks beyond disaster and war noting how authenticity bears on political intentions and image building exploring how reconstruction is used to tell a political or historical story so conditioning the ways in which the built environment is perceived and appreciated by its users This is not just about the buildings as bricks and mortar but about perceptions of identity and the social and historical values which buildings and spaces embody for a richly diverse population This book will be valuable to all who are concerned with heritage as practitioners or consumers particularly those concerned with reconstruction and the creation of authentic places and experiences architects architectural historians town planners preservationists conservationists and those involved in heritage management and material culture
