

Flight 6

Student: Judy Smith

DUAL-LOCAL

(7 to 10 knot crosswind conditions required)

SEQUENCE:

1. Preflight Orientation
2. Flight
3. Postflight Evaluation

LESSON OBJECTIVE:

During the lesson, the student will review crosswind landing techniques in actual crosswind conditions and attempt to increase understanding and proficiency during their execution. The principle of a stabilized landing approach will be emphasized.

LESSON REVIEW:

1. Slips
2. Crosswind Landings

COMPLETION STANDARDS:

The student will demonstrate an understanding of how the slip is used to perform crosswind landings. In addition, the student will demonstrate safe crosswind landings in light crosswind conditions.

NOTES: Emphasize that the runway, airplane path, and longitudinal axis of airplane must be aligned at touchdown. Have the student establish a slip early on the final approach rather than crabbing and establishing slip just prior to touchdown. This should allow the student to concentrate on keeping the upwind wing low while maintaining runway alignment during the flare.

In this example, the lesson plan is specifically intended to help a student who is having difficulty with crosswind approaches and landings.

Sample Objectives For Lesson Plans:

Goal-Driven Lesson Planning for Teaching English to Speakers of Other Languages Christina Michaud, Marnie Reed, 2010-07-29 This book is more than a collection of activities or ready made lesson plans to add to a teaching repertoire. Instead, Goal Driven Lesson Planning is intended to empower teachers and help them create a principled framework for their teaching, a framework that will shape the varied activities of the ESL classroom into a coherent teaching and learning partnership. After reading this book, teachers and prospective teachers will be able to articulate their individual teaching philosophies. Goal Driven Lesson Planning shows readers how to take any piece from English language materials, an assigned text, a random newspaper article, an ESL activity from a website, etc., and use it to teach students something about language. Readers are walked through the process of reflecting on their role in diagnosing what that something is, what students really need, and planning how to get them there and how to know when they got there in a goal-driven, principled manner. This book has chapters on the theory of setting specific language goals for students, how to analyze learner needs, including an initial diagnostic and needs analysis templates to use when planning goal-driven English language lessons, explicit instruction on giving corrective feedback, how to recognize and assess student progress, and the mechanics and logistics that facilitate the goal-driven language classroom.

Writing Effective Lesson Plans Peter Serdyukov, Mark Ryan, 2008 Developed by two educators with experience in both elementary and secondary classrooms, *Writing Effective Lesson Plans* details a unique, step-by-step procedure designed to streamline the process of lesson planning and make teaching smoother and more efficient. Coined the Five Star Lesson Plan by the authors, this model consists of five classic components: lesson description, goals and objectives, materials and tools, procedures, and reflective assessment and evaluation. This workbook guides beginning and experienced teachers through each step to create lesson plans that best meet the needs of every student. It also explores the inherent challenges to effective lesson planning, such as time efficiency, knowledge construction, skill development involving the students, families, and implementing your plan. With its mix of concise theory and hands-on activities, this book is a one-stop resource encouraging a deep and thoughtful approach to a skill that is often not sufficiently developed in teacher preparation programs.

Lorber, 1996 The fourth edition of *Objectives Methods and Evaluation*

for Secondary Teaching does more than provide a useful guide for planning teaching and evaluating. Unlike most other methods texts, this book focuses on helping teachers decide what they want their students to learn, how their students can use the information and skills, and how they as teachers can determine if the instructional objectives have been achieved. Most of these questions have philosophical roots, so the text begins by building a foundation consisting of philosophic viewpoints, historical landmarks in education, and learning theories. These foundation points are then continually referred to in order to help students link theory with practice. This text also incorporates a number of features not found in other texts. Among these are discussions of current goals discussed by the national councils in various subject areas, the factors inhibiting greater use of computers in schools, the implication of developments such as E-mail and the Internet, and multiculturalism. This text will help students better understand the problems and possible solutions, sound instructional plan, and implement that plan by involving students in activities concerning relevant content. It is an invaluable reference guide for both students and educators and a tool that will enable students to engage in more meaningful discussions both in and outside the classroom.

Fire and Life Safety Educator Marsha P Giesler, 2024-09 **Development Skills and Concepts through Educational Technology** Dr. Anita Sharma, 2021-09-10

Development Skills and Concepts through Educational Technology Skills are involved in construing the meaning of symbols used for conveying the conceptual content. These skills fall under broad categories, namely literacy, numeracy, and graphicacy. Literacy includes understanding terminology and explanations using words. Numeracy includes understanding mathematical notations for communication using numbers. Teacher knowledge of appropriate performance strategies for a learning activity is also required for guiding different work. For example, the teacher needs to know why and when to ask students to reconsider their choice of the numerical scale while plotting a graph. To gradually develop this skill, graphs involving one nominal variable, e.g., months of the year, have been found as good starting points for facilitating students to focus on numerical issues along a single dimension. Technology in education is most simply and comfortably defined as an array of tools that might prove helpful in advancing student learning and may be measured in how and why individuals behave. Educational Technology relies on a broad definition of the word technology. Technology can refer to material objects of use to humanity, such as machines or hardware, but it can also encompass broader themes, including systems, methods of organization, and techniques. Hope this book will be useful to students as a reference book and will be a priced collection for their own library.
