

Chapter 6: Memory

Module 6.1 Remembering

Memory Processes: Human Memory as an Information Processing System

--Our memory can be conceptualized as an information processing system split into 3 categories:

1. **Encoding:** Converting information into a form usable in memory

- Relies on different sensory modalities, ie: auditory or visual.

- Sometimes people rely on meaning of incoming information, called **semantics**

- ie: might remember key terms better if you try to understand what it means rather than memorizing verbatim

2. **Storage:** Retaining information in memory

- How long something is kept depends on system being used

3. **Retrieval:** Bringing to mind information in memory

- Where you're accessing conscious information
- Some memories easier to recall than others, but might be dependent on **retrieval cues**, which are cues associated with original learning that may facilitate retrieval of these memories

Sensory Memory

- Known as briefest storage system that hold memories of sensory impressions for short period of time ie: sights and sounds

- Memory here lasts from fraction of second to 3-4 seconds

- Considered to be first memory system where info passes through our system into memory storage system

Iconic Memory: where mental representations of an image is held for a fraction of a second

Idetic Memory: AKA photographic memory, where people can look at something quickly and recall this information

Ebook: Essentials of Understanding Psychology Feldman, 2016-09-16 Ebook *Essentials of Understanding Psychology*

Test Booklet for Invitation to Psychology Victor Benassi, Martin Lobdell, 2013-10-22 Test Booklet for *Invitation to Psychology* contains approximately 2000 multiple choice questions that test mastery of the concepts and information presented in the 20 chapters and statistics appendix of *Invitation to Psychology*. The topics covered in these chapters include the following: the definition of psychology, the psychological basis of behavior, sensation and perception, states of awareness, learning, memory and cognition, motivation and emotion, abnormal psychology, and social behavior. In each chapter, questions are arranged in the order in which concepts are presented. The correct answer to each question is indicated by an asterisk. A text page reference enables instructors to crosscheck from the text and to prepare tests and examinations on material that students have read. In preparing this second test file, the authors have modified or deleted those original questions that proved to be vague or difficult for students and have taken care to include a good blend of factual and conceptual questions. Although some are similar to questions in the first test file, most are new items that have been developed through the authors' own classroom use of the text and ancillary materials. No One Is Too Old To Learn Clive Wilson, 2006-06 NEUROANDRAGOGY tells of new advances in brain research Much of this new research confirms what teachers of adults have been saying for years A very good example of this is that children and adults do not learn in the same way The brain of the child does not reach new brain function and true maturity until age 21 and older This is clearly seen when youth use their emotions to decide and not their executive brain as adults do NEUROANDRAGOGY includes research that confirms ways adults can improve their IQ and sharpen their mind even into old age This is possible because brain plasticity still occurs late in life Even more interesting is the fact that we may even be able to experience neurogenesis new brain cell growth through life if we continue to learn new things and live within a brain stimulating environment NEUROANDRAGOGY also makes the case for a possible delay of Alzheimer's disease by the activity of new learning music a new language a new town etc All this contributes to good brain health which improves on life itself

Comprehensive Review of Psychology Vincent Filingeri, 2011-10-03 Comprehensive Review of Psychology CRP was written for students. It covers all of the important areas of psychology found in an introductory psychology course. The areas covered include approaches, methods, biological basis of behavior, sensation, perception, consciousness, learning, memory, cognition, intelligence, motivation, emotion, developmental psychology, personality, health psychology, abnormal psychology, therapies, social psychology, industrial, organizational psychology, and statistics. The reader of the CRP will notice some significant differences between this book and other review books. Comprehensive Review of Psychology fills the gap between those review books that lightly touch on the important concepts and those books that are not complete in both content and subject areas of psychology. Comprehensive Review of Psychology serves as a valuable learning tool for high school, undergraduate, and graduate students. It is an aid in the preparation for the College Board's College Level Examination Program (CLEP), Advanced Placement Examination (AP) in Psychology, and the Educational Testing Service's Graduate Record Examination (GRE). The reader of the CRP will understand psychology better and perform well on any psychology examination.

Psychology Robin M. Kowalski, Drew Westen, 2005 Students often get lost in the details; most will never take a second psychology course; they often have trouble relating the material to their everyday lives. The new Fourth Edition of Kowalski and Westen's Psychology addresses these teaching challenges. The student develops evaluative reasoning through self-discovery for a lifetime of learning. Students are drawn into the material in a way that intrigues and stimulates so they begin to see psychology at work in their daily lives. Like its predecessors, this new edition effectively captures the diversity and breadth of psychology. A complete overview of how human beings think, feel, and behave is included. Psychology is an evolving science which continually addresses and re-addresses the relationship between psychological events and their neural underpinnings, between cognition and emotion, between cultural processes and human evolution, between nature and nurture, and more.
