

Our counting numbers count separate things. One finger, two fingers, three fingers. When we count fingers, we don't count the smoothness connecting the fingers, nor do we count the hand that holds the fingers in place. Our counting was not created to originally count round or continuous things. When you count, you are always counting across a gap. But modern mathematics is very powerful. Modern mathematics learned how to translate π , a gapless smooth ratio into counting numbers. How does it do that? It relies on the idea of infinity. The numbers we use to count n are never actually n , but by using them many, many times, we can get very, very (infinitely?) close to what n actually is.

This is probably the simplest formula for π . It is called the Madhava formula after the Indian mathematician who discovered it. It goes like this:

$$\frac{4}{1} - \frac{4}{3} + \frac{4}{5} - \frac{4}{7} + \frac{4}{9} - \frac{4}{11} + \frac{4}{13} - \frac{4}{15} + \frac{4}{17} - \frac{4}{19} + \frac{4}{21} - \frac{4}{23} + \frac{4}{25} - \frac{4}{27} + \frac{4}{29} - \frac{4}{31} + \frac{4}{33} - \frac{4}{35} + \dots$$

The idea is that you start with a number bigger than π , (4) then subtract that by a smaller number ($\frac{4}{3}$), then add an even smaller number ($\frac{4}{5}$), then subtract that an even further smaller number etc. If you do that forever, you close in on π . This is actually better definition of π because there is no randomness. You can always tell what will come next.

That said writing out the Madhava formula again and again is rather annoying. So we will often round π .

The best way to round π is to say that $\pi \approx 3$. The " $\approx$ " sign means rounds to. π is very close to 3, so we often will just assume that $\pi \approx 3$.

Sometimes though we need a more precise way to talk about π . After all, $\pi \neq 3$. It is only very close to 3.

When we need more precise ways to round π , we will say $\pi \approx 3.14$ or $\pi \approx \frac{22}{7}$ depending on whether we want to work with fractions or decimals. Every time we round π though, we must remember that $\pi \neq 3.14$, it only $\pi \approx 3.14$ or $\frac{22}{7}$.

Practice:

- I. What is the definition of π ?
- II. How many times bigger is the circumference than the radius?
- III. Why do all circles have the same shape?
