Illus Climate Change and Small Island States Jon Barnett, John Campbell, 2010-08-12 Small Island Developing States are often depicted as being among the most vulnerable of all places to the effects of climate change and they are a cause celebre of many involved in climate science politics and the media Yet while small island developing states are much talked about the production of both scientific knowledge and policies to protect the rights of these nations and their people has been remarkably slow This book is the first to apply a critical approach to climate change science and policy processes in the South Pacific region It shows how groups within politically and scientifically powerful countries appropriate the issue of island vulnerability in ways that do not do justice to the lives of island people It argues that the ways in which islands and their inhabitants are represented in climate science and politics seldom leads to meaningful responses to assist them to adapt to climate change Throughout the authors focus on the hitherto largely ignored social impacts of climate change and demonstrate that adaptation and mitigation policies cannot be effective without understanding the social systems and values of island societies

Probabilistic Aspects of Life Prediction W. Steven Johnson, B. M. Hillberry, 2004 As fatigue and fracture mechanics approaches are used more often for determining the useful life and or inspection intervals for complex structures realization sets in that all factors are not well known or characterized Indeed inherent scatter exists in initial material quality and in material performance Furthermore projections of component usage in determination of applied stresses are inexact at best and are subject to much discrepancy between projected and actual usage Even the models for predicting life contain inherent sources of error based on assumptions and or empirically fitted parameters All of these factors need to be accounted for to determine a distribution of potential lives based on combination of the aforementioned variables as well as other factors The purpose of this symposium was to create a forum for assessment of the state of the art in incorporating these uncertainties and inherent scatter into systematic probabilistic methods for conducting life assessment
