The Web Services and Service Oriented Architecture Revolution Melvin B. Greer, Melvin B. Greer Jr, 2006 While Web services technology is a straightforward extension of existing Internet technology its ultimate impact on the enterprise will be profound The Web Services and Service Oriented Architecture Revolution is about providing dramatic business performance improvements through incremental technological innovation While the initial focus of the revolution is on cost reduction the ultimate objective is to enable the Agile Enterprise Current marketplace disillusionment notwithstanding author Melvin B Greer Jr provides immediate real world project benefits to those willing and able to develop and follow a well conceived Web services game plan Embarking on this journey is not an easy endeavor and the stakes are high But some businesses are already achieving significant benefits in actual mission critical high performance productive applications that rely on Web services technology Don't let your competitors begin the migration to this emerging technology before you do With patience and the right help your enterprise can succeed

Web Services Business Strategies and Architectures Mike Clark, Peter Fletcher, Jeffrey J. Hanson, Romin Irani, Mark Waterhouse, Jorgen Thelin, 2013-12-14 Adopting Web Services will affect many processes within any organization To throw light on the most important issues we have commissioned Experts in the Industry to share their insights The resultant papers cover a broad spectrum from architecture to business strategies without diverting into deep technological fashions Each study in the collection will answer specific business challenges thrown up by Web Service architectures Before changing commissioning or evaluating a Web Service initiative all IT Managers System Architects Lead Developers and Business Visionaries should study and reference this book

IBM Software for SAP Solutions Yaro Dunchych, Peter Bahrs, Khirallah Birkler, Bernd Eberhardt, Navneet Goyal, James Hunter, Derek Jennings, Joe Kaczmarek, Michel Laaroussi, Michael Love, Stefan Momma, Nick Norris, Martin Oberhofer, Manfred Oevers, Paul Pacholski, Andrew Stalneck, Jörg Stolzenberg, Pierre Valiquette, IBM Redbooks, 2015-09-29 SAP is a market leader in enterprise business application software SAP solutions provide a rich set of composable application modules and configurable functional capabilities that are expected from a comprehensive enterprise business application software suite In most cases companies that adopt SAP software remain heterogeneous enterprises running both SAP and non SAP systems to support their business processes Regardless of the specific scenario in heterogeneous enterprises most SAP implementations must be integrated with a variety of non SAP enterprise systems Portals Messaging infrastructure Business process management BPM tools Enterprise Content Management ECM methods and tools Business analytics BA and business intelligence BI technologies Security Systems of record Systems of engagement The tooling included with SAP software addresses many needs for creating SAP centric environments However the classic approach to implementing SAP functionality generally leaves the business with a rigid solution that is difficult and expensive to change and enhance When SAP software is used in a large heterogeneous enterprise environment SAP clients face the dilemma of selecting the correct

set of tools and platforms to implement SAP functionality and to integrate the SAP solutions with non SAP systems This IBM Redbooks publication explains the value of integrating IBM software with SAP solutions It describes how to enhance and extend pre built capabilities in SAP software with best in class IBM enterprise software enabling clients to maximize return on investment ROI in their SAP investment and achieve a balanced enterprise architecture approach This book describes IBM Reference Architecture for SAP a prescriptive blueprint for using IBM software in SAP solutions The reference architecture is focused on defining the use of IBM software with SAP and is not intended to address the internal aspects of SAP components The chapters of this book provide a specific reference architecture for many of the architectural domains that are each important for a large enterprise to establish common strategy efficiency and balance The majority of the most important architectural domain topics such as integration process optimization master data management mobile access Enterprise Content Management business intelligence DevOps security systems monitoring and so on are covered in the book However there are several other architectural domains which are not included in the book This is not to imply that these other architectural domains are not important or are less important or that IBM does not offer a solution to address them It is only reflective of time constraints available resources and the complexity of assembling a book on an extremely broad topic Although more content could have been added the authors feel confident that the scope of architectural material that has been included should provide organizations with a fantastic head start in defining their own enterprise reference architecture for many of the important architectural domains and it is hoped that this book provides great value to those reading it This IBM Redbooks publication is targeted to the following audiences Client decision makers and solution architects leading enterprise transformation projects and wanting to gain further insight so that they can benefit from the integration of IBM software in large scale SAP projects IT architects and consultants integrating IBM technology with SAP solutions
