

1. There was no organization in the instructions. The instructions should be written in a "...three three-part structure of instruction, body, and conclusion Moore 1981." The instructions presented above failed all three, with one exception. There's no instruction on how to turn on the device. There is review of instruction of how to be successful presented in the conclusion.
 2. There is no defined audience for these instructions. With a clear audience, that will depict the "...the level of familiarity your readers have with the topic Moore." If the target audience is for people who are familiar with technology, the instructions don't have to go as in-depth detail as if the target audience was asked for people that are not as tech-savvy. Then the instructions would have to be done as follows.
 3. There is equipment needed list. That should be in the beginning of the instructions manual. With the equipment list, it could leave the reader with unanswered questions. What cord attaches to the computer to upload the recording? Questions such as that could be easily answered with an equipment list.
