

35. A scientist crossed a red flower with a white flower and got a pink flower. Explain what happened to get a result like this.
- Codominance occurred, which means the alleles were neither dominant nor recessive so they mixed together.
  - The genotype and phenotype did not agree so something new was created.
  - A genetic defect occurred because a purebred dominant and a purebred recessive should not be crossed.
  - The scientist did not use enough constants in the crossing, so the experiment was not reliable.
36. In a human, how many chromosomes came from the father?
- All of the chromosomes
  - Half of the chromosomes
  - None of the chromosomes since chromosomes only come from the mother
  - Usually around ten chromosomes

| Organism   | Number of chromosomes in body cells |
|------------|-------------------------------------|
| Cat        | 38                                  |
| Chimpanzee | 48                                  |
| Cornfish   | 500                                 |
| Human      | 46                                  |
