Collected Papers in Physics and Engineering James Thomson,James C. Thomson,1912 *Frames of Meaning* HM Collins,TJ Pinch,2013-04-15 Originally published in 1982 Taking a radical interpretation of the Kuhnian concept of paradigm incommensurability the authors begin by discussing the difficulties of gaining access to the ideas of communities with different rational categories and then define the subject area of parapsychology offering a review of the relevant literature After exploring parapsychology s compatibility with science physics psychology and quantum theory the authors move on from this predominantly theoretical framework and devote the middle section to an empirical study of metal bending They conclude with an examination of the results analyse diverse interpretations and investigate the consequences for the idea of scientific revolution How Einstein Created Relativity out of Physics and Astronomy David Topper,2012-09-27 This book

tracks the history of the theory of relativity through Einstein s life with in depth studies of its background as built upon by ideas from earlier scientists The focus points of Einstein s theory of relativity include its development throughout his life the origins of his ideas and his indebtedness to the earlier works of Galileo Newton Faraday Mach and others the application of the theory to the birth of modern cosmology and his quest for a unified field theory Treading a fine line between the popular and technical but not shying away from the occasional equation this book explains the entire range of relativity and weaves an up to date biography of Einstein throughout The result is an explanation of the world of relativity based on an extensive journey into earlier physics and a simultaneous voyage into the mind of Einstein written for the curious and intelligent reader
