Füger,2012-10-20 The importance of supply chain management has increased over the last few decades Today entire supply
chains are competing with each other instead of individual companies As such supply chain management has become a way
for companies to set themselves apart from competing companies and their supply chains Interestingly supply chain
management mainly focuses on efficiency oriented topics rather than effectiveness driven issues in particular the design of
supply chains from manufacturing sites downstream instead of upstream from the customer The Supply Chain Differentiation
Guide offers a modern approach to supply chain management While for many years one size fits all approaches to supply
chain management were very common the current efforts of managers and academics alike focus on the simultaneous
management of multiple supply chains Despite the interest of the business sector in the management of multiple supply
chains academia has largely neglected this topic to date The Supply Chain Differentiation Guide addresses this shortcoming
introducing both established and cutting edge management methods to the context of supply chain differentiation and

Part I includes an introductory chapter and an applied chapter on conducting a risk assessment Part II provides a description
of how the measures were organized and quick view tables that provide easy access to measures with enough information to
allow for an estimate of the likelihood that reading additional information about a particular measure would prove fruitful

Measures are organized alphabetically into tables for measures of anger aggression or violence Each of the tables provides the name of the measure the purpose for which the measure was developed and the targeted population The tables also provide information on the method of assessment the amount of time required to use the measure and the page number where additional information is available Part II also contains the review of each measure Part III provides examples of measures that can be copied for research or clinical purposes
