

Blackburne, 1997, p. 123: "Black and Shapere's (1996) book is a very welcome contribution to the philosophy of science, and it is a pleasure to see it published in paperback."

But, as Black has so effectively demonstrated, Black's discussion of science is off-putting. For, if Black is correct, it is impossible to have a theory that is not subject to falsification. Other explanations for science's success are more plausible, and would not require such radical revision. If Black's view is correct, we should expect that all scientific claims would be equally likely to be wrong as right. — *Science: The Philosophy of Science*

For instance, neither's argument gives much support to a theory of "complex" phenomena.

But, if there is no such thing as a simple phenomenon, and if there are no simple phenomena, then it is not possible to have a theory of science. — *Science: The Philosophy of Science*
