After the War Ruth H. Howes, Caroline L. Herzenberg, 2015-12-01 This book examines the lives and contributions of American women physicists who were active in the years following World War II during the middle decades of the 20th century It covers the strategies they used to survive and thrive in a time where their gender was against them The percentage of PhD s in physics has risen for 6% in 1983 to 20% in 2012 an all time high for women By understanding the history of women in physics these

gains can continue It discusses to major classes of women physicists those who worked on military projects and those who worked in industrial laboratories and at universities largely in the late 1940s and 1950s While it includes minimal discussion of physics and physicists in the 1960s and later this book focuses on the challenges and successes of women physicists in the years immediately following World War II and before the eras of affirmative actions and the use of the personal computer

Beskin,A. Balogh,Maurizio Falanga,Maxim Lyutikov,Sandro Mereghetti,Tsvi Piran,R.A. Treumann,2016-01-29 This volume extends the ISSI series on magnetic fields in the Universe into the domain of what are by far the strongest fields in the Universe and stronger than any field that could be produced on Earth The chapters describe the magnetic fields in non degenerate strongly magnetized stars in degenerate stars such as white dwarfs and neutron stars exotic members called magnetars and in their environments as well as magnetic fields in the environments of black holes These strong fields have a profound effect on the behavior of matter visible in particular in highly variable processes like radiation in all known wavelengths including Gamma Ray bursts The generation and structure of such strong magnetic fields and effects on the environment are also described **Physics of Radiation and Climate** Michael A. Box,Gail P. Box,2015-10-14 Our current climate is strongly influenced by atmospheric composition and changes in this composition are leading to climate change Physics of Radiation and Climate takes a look at how the outward flow of longwave or terrestrial radiation is affected by the complexities of the atmosphere s molecular spectroscopy This book examines the planet in **The Sceptical Optimist** Nicholas Agar,2015-07-09 The rapid developments in technologies especially computing and the advent of many smart devices as well as rapid and perpetual communication via the Internet has led to a frequently voiced view which Nicholas Agar describes as radical optimism Radical optimists claim that accelerating technical progress will soon end poverty disease and ignorance and improve our happiness and well being Agar disputes the claim that technological progress will automatically produce great improvements in subjective well being He argues that radical optimism assigns to technological progress an undeserved pre eminence among all the goals pursued by our civilization Instead Agar uses the most recent psychological studies about human perceptions of well being to create a realistic model of the impact technology will have Although he accepts that technological advance does produce benefits he insists that these are significantly less than those proposed by the radical optimists and aspects of such progress can also pose a threat to

values such as social justice and our relationship with nature while problems such as poverty cannot be understood in technological terms He concludes by arguing that a more realistic assessment of the benefits that technological advance can bring will allow us to better manage its risks in future **Canadian Journal of Physics** ,2015 Beyond Databases, Architectures and Structures Stanisław Kozielski,Dariusz Mrozek,Paweł Kasprowski,Bożena Małysiak-Mrozek,Daniel Kostrzewa,2015-04-28 This book constitutes the refereed proceedings of the 11th International Conference entitled Beyond Databases Architectures and Structures BDAS 2015 held in Ustro Poland in May 2015 This book consists of 53 carefully revised selected papers that are assigned to 8 thematic groups database architectures and performance data integration storage and data warehousing ontologies and semantic web artificial intelligence data mining and knowledge discovery image analysis and multimedia mining spatial data analysis database systems development application of database systems
