

RCA (Thomson) DOCSIS 2.0 Certified Cable Modem

Features:

- DOCSIS 1.0, 1.1, 2.0 certified
- Bridging between the USB and Ethernet port.
- Easy access to advanced diagnostics web pages.
- USB port for easy installation.
- Superior high performance platform.
- 5x of the Internet up to 100 times faster than a 56k analog modem (1)

It connects with a high-speed Internet modem, which connects to the Internet. The modem connects to the Internet via a high-speed network (cable or DSL) and provides a high-speed connection to the Internet. The modem also provides a high-speed connection to the Internet via a high-speed network (cable or DSL) and provides a high-speed connection to the Internet via a high-speed network (cable or DSL).

RCA's latest DOCSIS 2.0 certified cable modem, the DCM-425, supports up to 16 upstream flows and improved data throughput rates. It represents a significant improvement of our DOCSIS product line in a small form factor.

The 16 upstream flows allow operators to provide varied Web services and support more efficient traffic prioritization schemes for advanced services. The DOCSIS allows symmetrical data transfer, and optimal upstream throughput.

The modem also integrates Proportional™ technology, enabling the connection of more Internet users without additional network bandwidth. RCA's latest design is consistent throughout its product line of cable modems and gateways.

DOCSIS Based Design

The cable modem is certified to work on any DOCSIS-based HFC cable system (DOCSIS 1.0, DOCSIS 1.1, or DOCSIS 2.0).

Bridging

Allows simultaneous connection of two PCs and enables Ethernet and USB port data traffic bridging.

5.2 Standby Indicators

Five green LED lights on the front of the unit provide the user an intuitive mechanism for verifying the system's operation and connectivity.

Single-on-Line (Simplified) Setup Guide

The guide steps users through the connections of the broadband cable, electrical power, and Ethernet or USB cables.

Security

Supports IEEE 802.1x authentication protocol to support secure data exchange between modems and cable operator's network.

LED Administrative (Status) Indicator

Helps prevent unnecessary fault calls.

Internet Web Pages

The DCM-425 contains multiple integrated Web pages allowing users access to information about the status of the modem and product settings including drivers and security.

Internet Security Button

Turning the modem off puts the modem into "standby" mode. The modem remains locked to the CMTS, preventing its (CMNT) existing subscribers to receive service quickly when booted again. The button serves as a security feature, ensuring the customer that the PC/network connection is deactivated when the button is in the off position, allowing security concerns of an "always on" connection.

Proportional Technology

This advanced transport technology (Dynamic Proportional Flow Control Suppression) provides the subscriber with faster data transfer. It also allows operators to increase the number of subscribers on their network without affecting subscriber connection speeds. Under typical network conditions, both the subscribers and operators can benefit from more data bandwidth per subscriber and all more users connected for IP-bridging.
