Transhumanism David Livingstone,2015-09-02 Transhumanism is a recent movement that extols man s right to shape his own evolution by maximizing the use of scientific technologies to enhance human physical and intellectual potential While the name is new the idea has long been a popular theme of science fiction featured in such films as 2001 A Space Odyssey Blade Runner the Terminator series and more recently The Matrix Limitless Her and Transcendence However as its adherents hint at in their own publications transhumanism is an occult project rooted in Rosicrucianism and Freemasonry and derived from the Kabbalah which asserts that humanity is evolving intellectually towards a point in time when man will become God Modeled on the medieval legend of the Golem and Frankenstein they believe man will be able to create life itself in the form of living machines or artificial intelligence Spearheaded by the Cybernetics Group the project resulted in both the development of the modern computer and MK Ultra the CIA s mind control program MK Ultra promoted the mind expanding potential of psychedelic drugs to shape the counterculture of the 1960s based on the notion that the shamans of ancient times used psychoactive substances equated with the apple of the Tree of Knowledge And as revealed in the movie Lucy through the use of smart drugs and what transhumanists call mind uploading man will be able to merge with the Internet which is envisioned as the end point of Kabbalistic evolution the formation of a collective consciousness or Global Brain That awaited moment is what Ray Kurzweil a director of engineering at Google refers to as The Singularity By accumulating the total of human knowledge and providing access to every aspect of human activity the Internet will supposedly achieve omniscience becoming the God of occultism or the Masonic All Seeing Eye of the reverse side of the American dollar bill

ECSM2015-Proceedings of the 2nd European Conference on Social Media 2015 Dr Paula Peres, Dr Anabela Mesquita, 2015-07-06 Complete proceedings of the 2nd European Conference on Social Media, Porto, Portugal. Published by Academic Conferences and Publishing International Limited. **The long and short of mental time travel--self-projection over time-scales large and small** James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days, months, years and beyond. This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales. Dealing with conceptual time, mental time travel (also called mental simulation, self-projection, episodic semantic memory, prospection, foresight) allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge. Moreover, contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors. But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so-called present moment of perception-action cycle time? This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa, no less progress and integrative synthesis within and across scientific domains might be facilitated. Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus-like feedforward-feedback system for goal pursuit. As an example, it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception-action cycle time, namely the interplay of anticipatory attention and

working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales

Values, Economic Crisis and Democracy Mălina Voicu, Ing vill C. Mochmann, Hermann Dülmer, 2016-01-29 For the past decade European countries have undergone a severe economic crisis with severe consequences both for individuals and for governments Unemployment and rising poverty have compelled individuals to reconsider their own priorities and goals while governments have been forced to rethink social policies on the national level as well as their international economic and political agreements Some countries have been more deeply affected by the crisis than others and the impact of economic shortage on individuals and governments has differed not only because of the different magnitudes of the crisis but also because individuals react differently to the contextual changes This book makes use of cross national survey data to explore the impact of wealth and economic contexts on social values Instead of attempting to explain how aggregate changes occur as previous volumes have done the chapters in this collection focus on micro level effects to interrogate more deeply the interplay between attitudes and values and the way both can change as a result of transformation of economic context This book elaborates on several dimensions of value change the measurement model and the way it changes under the impact of economic shortage the connection between universal value orientations and attitudes towards different objects e g the welfare state immigrants and ethnic groups the effects of economic factors and vulnerability on values and attitudinal orientations how particular political and economic contexts produce changes in political orientations This book focuses on the interrelationship of social values attitudes and economic scarcity in the context of the last economic crisis experienced by many European countries It will appeal to scholars and students of sociology political science and economics
