Digital Video Surveillance and Security Anthony C. Caputo, 2014-03-18 The use of digital surveillance technology is rapidly growing as it becomes significantly cheaper for live and remote monitoring The second edition of Digital Video Surveillance and Security provides the most current and complete reference for security professionals and consultants as they plan design and implement surveillance systems to secure their places of business By providing the necessary explanations of terms concepts and technological capabilities this revised edition addresses the newest technologies and solutions available on the market today With clear descriptions and detailed illustrations Digital Video Surveillance and Security is the only book that shows the need for an overall understanding of the digital video surveillance DVS ecosystem Highly visual with easy to read diagrams schematics tables troubleshooting charts and graphs Includes design and implementation case studies and best practices Uses vendor neutral comparisons of the latest camera equipment and recording options **Casino Journal** ,2009 Today's Facility Manager ,2007 *Campus Technology* ,2007 Security ,2008 CCTV Surveillance Herman Kruegle, 2011-03-15 This revision of the classic book on CCTV technology CCTV Surveillance provides a comprehensive examination of CCTV covering the applications of various systems how to design and install a system and how to choose the right hardware Taking into account the ever changing advances in technology using digital techniques and the Internet CCTV Surveillance Second Edition is completely updated with the recent advancements in digital cameras and digital recorders remote monitoring via the Internet and CCTV integration with other security systems Continuing in the celebrated tradition of the first edition the second edition is written to serve as a useful resource for the end user as well as the technical practitioner Each chapter begins with an overview and presents the latest information on the relevant equipment describing the characteristics features and application of each device Coverage of aging or obsolete technology is reduced to a historical perspective and eight brand new chapters cover digital video technology multiplexers integrated camera lens housing smart domes and rapid deployment CCTV systems Serves as an indispensable resource on CCTV theory Includes eight new chapters on the use of digital components and other related technologies that have seen a recent explosion in use Fully illustrated the book contains completely updated photographs and diagrams that represent the latest in CCTV technology advancements **Global Sources Electronics** ,2006 Metro ,2007 **Video Motion Detection and Tracking for Surveillance Applications** Joey Quevillon, 2012 These days video surveillance is an important security asset to control theft trespassing or traffic monitoring for any physical systems whether personal or commercial Implementing a surveillance system can allow people to get an idea of what is going on without the physical need to be there In the classical video surveillance installations there is a need for a human operator to consistently watch the video feed to see if there is any interesting activity An intelligent computer vision based motion detector eliminates the need for constant surveillance by an operator by notifying an interested party that there is relevant motion in the area being monitored Pan tilt

zoom PTZ cameras can be used to track an object of interest moving throughout a scene. However, in classic systems, this again would require the operator to manually move the PTZ camera to get the subject in scope. The goal of this work is to eliminate the operator from controlling the system. With the proposed automated tracking approach, an object found in a scene can be tracked automatically and followed until the target is out of camera scope.

Automated Surveillance Systems with Multi-camera and Robotic Platforms

Chung Hao Chen, 2009. This dissertation addresses automated surveillance systems focusing on four topics: 1. spatial mappings of omnidirectional and PTZ cameras and PTZ and PTZ cameras; 2. target hopping application for dual camera systems; 3. camera handoff and placement; 4. the mobile tracking platform. The four topics represent four contributions in this dissertation. Dual camera systems have been widely used in surveillance because of the ability to explore the wide field of view (FOV) of the omnidirectional camera and the wide zoom range of the PTZ camera. Most existing algorithms require a priori knowledge of the projection models of omnidirectional and PTZ cameras to solve the spatial mapping between any two cameras. The proposed methods not only improve the mapping accuracy by reducing the dependence on the knowledge of the projection model but also improved flexibility in adjusting to varying system configurations. The omnidirectional camera is capable of multi object tracking while the PTZ camera is able to track one individual target at one time to maintain the required resolution. It becomes necessary for the PTZ camera to distribute its observation time among multiple objects and visit them in sequence. In comparison with the sequential visiting and nearest neighbor methods, the proposed adaptive algorithm requires less computational and visiting time. Tracking with multiple cameras is mainly the consistent labeling or camera handoff problem. An automatic calibration procedure combined with Wilcoxon Signed Rank Test is proposed to solve the consistent labeling problem. Meanwhile, we introduce an additional constraint to search for optimal cameras overlapped field of views (FOVs) and resource management approach to improve camera handoff performance. Experiments show that our proposed camera handoff and placement can outperform existing approaches. However, in the majority of surveillance systems, their cameras are stationary. These stationary systems often require the desired object to stay within the surveillance range of the system. Thus, the robotic platform we propose uses a visual camera to sense the movement of the desired object and a range sensor to help the robot detect and then avoid obstacles in real time while continuing to track and follow the desired object. Experiment shows this robotic and intelligent system can fulfill the requirements of tracking an object and avoiding obstacles simultaneously when the object moves in speed of 4 km/hr.
