

Parallel Circuit Math Worksheet Answers

1. Draw a circuit diagram for a circuit with one battery and three light bulbs in parallel.

2. A circuit has one battery and two light bulbs in parallel. One bulb has a resistance of $2\ \Omega$ and the second bulb has a resistance of $3\ \Omega$. The total resistance for two bulbs in parallel is equal to the product of their resistances divided by the sum of their resistances. Find the total resistance of the circuit.

Use the equation: $R_{\text{total}} = \frac{R_1 \times R_2}{R_1 + R_2}$

$[2\ \text{Ohms} \times 3\ \text{Ohms}] / [2\ \text{Ohms} + 3\ \text{Ohms}] = 1\ 1/5\ \text{Ohms} = 1.2\ \text{Ohms}$

3. Two $1.5\ \text{V}$ batteries are connected in parallel. What is the voltage across the batteries?

$1.5\ \text{V}$

4. A circuit has two $1.5\ \text{V}$ batteries in parallel and one $3\ \Omega$ light bulb. What is the current in the circuit?

$1.5\ \text{V} / 3\ \text{Ohms} = 0.5\ \text{Amperes}$

Use the equation: $I = \frac{V}{R}$

I = amount of current in the circuit (Amps)

V = battery voltage (Volts)

R = resistance (from light bulbs, etc.) in the circuit (Ohms)

Parallel Circuits Math Answer:

Resources for Teaching Discrete Mathematics Brian Hopkins, 2009 Hopkins collects the work of 35 instructors who share their innovations and insights about teaching discrete mathematics at the high school and college level The book s 9 classroom tested projects including building a geodesic dome come with student handouts solutions and notes for the instructor The 11 history modules presented draw on original sources such as Pascal s Treatise on the Arithmetical Triangle allowing students to explore topics in their original contexts Three articles address extensions of standard discrete mathematics content Two other articles explore pedagogy specifically related to discrete mathematics courses adapting a group discovery method to larger classes and using logic in encouraging students to construct proofs *Mathematics* United States. Ferguson,2013-04-17 This book is the outgrowth of a NATO Advanced Research Workshop held in Milton Keynes United Kingdom in the summer of 1990 The workshop brought together about 30 world leaders in the use of advanced technologies in the teaching of mathematics and science Many of these participants commented that the workshop was one of the more productive and exciting workshops that they had attended It was not uncommon to see participants engaged in informal discussion far into the evenings and early mornings long after formal sessions had ended It is my hope that this book captures the substance and excitement of many of the ideas that were presented at the workshop Indeed the process by which this book has come about has given every opportunity for the best thinking to get reflected here Participants wrote papers prior to the workshop After the workshop participants revised the papers at least once In a few instances three versions of papers were written Some participants could not resist the urge to incorporate descriptions of some of the newer developments in their projects The papers in this book demonstrate how technology is impacting our view of what should be taught what can be taught and how we should go about teaching in the various disciplines As such they offer great insight into the central issues of teaching and learning in a wide range of disciplines and across many grade levels ranging from elementary school through undergraduate college education *School Science and Mathematics* ,1917
