

Sheep Eye Dissection

Name: _____ Date: _____

Materials: safety goggles latex gloves
forceps paper towels dissecting scissors
sheep's eye dissecting tray

Procedure:

1. After putting on safety goggles and gloves get a dissecting tray and put a couple of pieces of paper towel on it. Place the sheep's eye on it for inspection.
2. Use a pencil to sketch a side-view external diagram of the eyeball in **Observation #1**. Make sure to label the **sclera**, **cornea**, **optic nerve**, and **muscles**.
3. Cut the **fat and muscles** off the eyeball so that you can see the **sclera**.
4. Place your eye specimen in the dissection pan. Turn the specimen so the cornea is on the left and the optic nerve is on your right. Select a place to make an incision of the sclera midway between the cornea and optic nerve. Use the point of a very sharp razor blade to make a small cut through the sclera. Fluid should ooze out of the eyeball when you have cut deeply enough. You will be reminded of how tough the sclera is when you make this cut. With your dissecting scissors, cut around the entire eye so that you have two equal hemispheres when you are finished.

5. Take the **vitreous humour** and put it onto your dissection tray
6. Pick up the back of the **sclera** that contains the **optic nerve**. Use your forceps to peel the **retina** off the inside of the eye. Place the **retina** onto your dissection tray
7. Use the forceps to carefully peel the **choroid coat** from the sclera. Place the **choroid coat** onto your dissection tray
8. Pick up the front half of the sclera that contains the **cornea**, **iris**, and **lens**. Remove the **lens** carefully with the forceps.
9. Try dropping the **lens** once from about shoulder height onto the lab bench. It probably bounces. After you have attempted this, place the **lens** onto the dissection tray
