## SIBERIAN WHEATGRASS *Agropyron fragile* (Roth) P. Candargy Plant Symbol = AGFR

Contributed by: USDA NRCS Idaho State Office

### Alternate Names

*Agropyron cristatum* (L.) Gaertn. ssp. *fragile* (Roth)  
A. Löve

### Uses

**Grazing/rangeland/hayland:** Crested wheatgrass is commonly recommended for forage production. It is palatable to livestock and wildlife and is a desirable feed in spring, and in the fall if it re-grows enough. It is used for cattle and horse winter forage, but protein supplements are required to ensure good animal health. It withstands heavy grazing pressure (65% use and greater) once stands are established. The best forage types in order are Siberian, desertorum, and Hycroft.

**Erosion control/reclamation:** Crested wheatgrasses are useful for soil stabilization. They compete well with other aggressive introduced grasses, but because of this trait, they are not compatible in mixes with native species. Their drought tolerance, fibrous root systems, and good seedling vigor make these species ideal for reclamation in areas with 8 to 20 inches annual precipitation. These grasses can be used in urban areas where irrigation water is limited to provide ground cover and to stabilize ditchbanks, dikes, pipelines, powerlines and roadsides.

**Wildlife:** Birds and small rodents eat crested wheatgrass seeds; deer, antelope and elk graze it, especially in spring and fall. Upland and song birds utilize stands for nesting.

### Status

Please consult the PLANTS Web site and your State Department of Natural Resources for this plant's current status (e.g. threatened or endangered species, state noxious status, and wetland indicator values).

### Description

Crested wheatgrasses *Agropyron cristatum*, *Agropyron desertorum*, and Siberian wheatgrass *Agropyron fragile* are perennial grasses commonly seeded in the western United States. They are long-lived, cool season, drought tolerant, introduced grasses with extensive root systems. Crested wheatgrass grows from 1 to 3 feet tall and seed spikes may be 1.5 to 3 inches long. Spiklets flattened, closely overlapping, located divergent (flatwise) at a slight angle on the rachis flower stem. The lemmas generally narrow to a short awn and glumes are firm, keeled, tapering into a short bristle. Culms are erect, in a dense tuft and leafy. Leaves are flat, smooth below, slightly coarse above and vary in width from 2 to 6 mm.

### Adaptation and Distribution

Crested wheatgrasses are adapted for non-irrigated seedings where annual precipitation averages 8 inches or more and where the frost free period is generally less than 140 days. On droughtier sites with 8 inches or less annual precipitation, Siberian wheatgrass may be the best choice; it is known to surpass the desertorum and Hycroft types in rate of establishment, stand persistence, and total forage yield on the more arid sites. Siberian wheatgrass has been seeded in areas with as little as 5 inches of

Plants of British Columbia Hong Qian,K. Klinka,1998 This book is an up to date checklist of the current valid taxonomy for all vascular plants bryophytes and lichens in British Columbia including synonyms species codes and other information A convenient geographically restricted comprehensive checklist like this one willaid greatly in avoiding the present confusion concerning the names of many species in the ecological and systematic literature as well as in applied fields The book is organized into three sections Part 1 organizes species alphabetically according to taxonomic order by families of vascular plants bryophytes and lichens Within each family the genera are listed alphabetically along with any synonyms former names and common names In Part 2 species are organized alphabetically according to their scientific names Part 3 lists common names followed by their scientific names Excluded names names inappropriately applied to plants in B C are given in an appendix Those familiar with plant taxonomy will find Part 1 particularly helpful when checking nomenclature semi professionals familiar with scientific names will use Part 2 and then Part 1 those who know only common names will check Part 3 and then Part 2 and Part 1 to determine families There is presently considerable confusion about many species names in B C Plant names change for many reasons and new plants invade Information about plants in B C is scattered in

several checklists most of them incomplete or out of date for some species such as liverworts no provincial checklist even exists This checklist therefore will be useful to all professionals working with vegetation and for students in agriculture botany ecology forestry and other sciences Although the focus is on B C the book will also be useful outside the province particularly in the northwest American states and in Alberta and the Yukon
