information on phytoplankton biomass and concentrations of other matter in the global oceans These satellite observations laid the groundwork for studying the marine environment and how it responds to climate change and the research community has since delivered information on the variability of marine ecosystems Part of this work is reflected in this stunning collection of peer reviewed publications presented at the workshop Colour and Light in the Ocean from Earth Observation CLEO held at ESA s ESRIN site in Frascati Italy on 6 8 September 2016 The event attracted more than 160 participants from all over the world including remote sensing experts marine ecosystem modelers in situ observers and users of Earth observation data Scientifically the meeting covered applications in climate studies over primary productivity and ocean dynamics to pools of carbon and phytoplankton diversity at global and regional scales It also demonstrated the potential of Earth observation and its contribution to modern oceanography Looking to the future new satellites developed by ESA under the coordination of the European Commission will further our scientific and operational observations of the seas With Sentinel 3A in orbit and its twin Sentinel 3B following in 2017 there is a new category of data available for operational oceanographic applications and climate studies for years to come These data are free and easy to access by anyone interested Looking at the role of oceans in our daily lives I am sure that this collection of scientific excellence will be valued by scientists of today and will inspire the next generation to carry these ideas into the future

Innovations in Renewable Energies Offshore Carlos Guedes Soares, Shan Wang, 2024-11-11 The contribution of renewable energy offshore to the total energy production is increasing as is the interest in this topic Innovations in Renewable Energies Offshore includes the papers presented at the 6th International Conference on Renewable Energies Offshore RENEW 2024 19 21 November 2024 Lisbon Portugal and aims to contribute to the knowledge about the developments and experience obtained in concept development design and operation of such devices The contributions cover a wide range of topics including Resource assessment Wind Energy Wave Energy Tidal Energy Photovoltaic Energy Hydrogen Offshore Multiuse Platforms PTO design Economic assessment Materials and structural design Maintenance Vessels Innovations in Renewable Energies Offshore will be of interest to academics and professionals involved or interested in applications of renewable energy resources offshore

Wave Energy Convertors in Tropical Seas Zhi Yung Tay, 2025-07-30 Tay provides a comprehensive description of the state of the art for recent conceptual designs on the integration of wave energy convertor WEC systems with floating structures in tropical seas discusses the unique environmental challenges and provides a guide for readers to develop WECs that are optimised for both wave patterns and the structures to which they are attached Through this book readers will gain a deep understanding of the unique environmental characteristics of tropical climates discover how WECs can be integrated into various floating structures and learn how WECs can be adapted and optimised for use in tropical climates This book also focuses on the hydroelasticity of large floating structures and how the structural deformation under wave action affects the energy generation of the WEC Tay provides the theoretical formulation and numerical framework for the modelling of WEC

systems when integrated with large floating structures Different wave models and mathematical optimisation schemes are presented to enable readers to determine the best design and application parameters depending on requirements In the book Tay includes case studies to illustrate how power generation of the integrated WEC arrays can be enhanced This includes power enhancement via sloshing resonance wave run up structural deformation and various optimisation schemes These case studies offer reader practical guidance on applying the information in this book to real world scenarios The combination of presented case studies discussion of the challenges of tropical seas and design optimisation parameters make this book invaluable to researchers and industry players working on the concepts of power enhancement and integrated WECs on floating structures
