The Real World of EU Accountability M. A. P. Bovens, Deirdre Curtin, Paul 't Hart, 2010-06-24 The Real World of EU Accountability examines how the European Union operates in practice and how and where its various institutions are held to account for the decisions they take and the power they wield **FAA Aviation News** ,2006 *European Union Agencies as Global Actors* Florin Coman-Kund, 2018-05-01 This book examines a largely unexplored dimension of the European agencies namely their role in EU external relations and on the international plane International cooperation has become a salient feature of EU agencies triggering important legal questions regarding the scope and limits of their international dimension the nature and effects of their international cooperation instruments their status within the EU and on the global level and leading potentially to tensions between EU law and international law This book fills the existing knowledge gap by scrutinizing the international cooperation legal framework and practice of EU agencies including their mandate tasks and instruments together with their legal status as actors with a global dimension It sets out a general legal analytical framework which combines legal parameters from EU and international law to assess EU agencies as global actors and examines in detail three case studies on carefully selected agencies to shed light on the complexities of EU agencies daily international cooperation **Federal Register** ,2014 *Administrative Regulation Beyond the Non-Delegation Doctrine* Marta Simoncini, 2018-06-28 The importance of administration in the EU has been growing progressively together with the development of EU competences and tasks in the internal market From the original model of a Community leaving enforcement with the Member States the EU has become a complex legal order where administrative tasks are spread among different actors including EU institutions EU agencies and national administrations Within this complex administrative law landscape agencies and their powers have been essentially upgraded This volume asks whether any such upgrade is compatible with EU law and its principles Exploring both the case law of the CJEU and the regulation relating to EU agencies the volume asks a crucial question about the legitimacy of the ever increasing role of agencies in the enforcement of EU law European Agencies Madalina Busuioc, 2013-02-28 European agencies have been created at a rapid pace in recent years in a multitude of highly pertinent and sensitive fields ranging from pharmaceuticals and aviation safety to chemicals or financial supervision This agency phenomenon shows no signs of relenting and the trend in recent years is towards the delegation of ever broader powers These bodies meant to operate at arm's length from political control have real power and their opinions and decisions can have a direct impact on individuals regulators and member states Given the powers wielded by the agencies who is responsible for holding these non majoritarian actors to account Is the growing concern surrounding agency accountability much ado about nothing or are we faced with the threat of a powerful and unaccountable bureaucracy These are precisely the questions that this book seeks to answer It thus addresses one of the most relevant topics in current European governance the accountability of European agencies Scholars have increasingly called attention to the risk of

placing too much power in the hands of such agencies which operate at arm's length from traditional controls and cannot easily be held accountable for their actions. Although this is a major issue of concern, systematic empirical research into the topic is lacking. This book addresses empirically whether and if so on what counts agency accountability is problematic. It examines how the accountability system of European agencies operates at both the de jure as well as the de facto level through an examination of legal provisions, relevant case law as well as policy documents and extensive interview material. Reflecting on these findings, the book also offers important theoretical insights for our understanding and study of accountability in a complex regulatory regime such as the EU context. The book follows a multi-disciplinary approach and is at the cutting edge of law and public administration.

Management of Conflict of Interest in Selected EU Agencies

European Court of Auditors, 2012. Conflict of interest situations can occur almost in any work place at any time. If they are not handled correctly, they can negatively affect the decision making process, give rise to scandals and cause reputational damage. The court evaluated policies and procedures for the management of conflict of interest situations for four selected agencies making vital decisions affecting the safety and health of consumers: namely the European Aviation Safety Agency (EASA), European Chemicals Agency (ECHA), European Food Safety Agency (EFSA) and the European Medicines Agency (EMA). The court found that none of the selected agencies adequately managed the conflict of interest situations. A number of shortcomings of varying degrees have been identified in agency specific policies and procedures as well as their implementation. P 4 of cover.

The Accountability Gap in EU law Marios Costa, 2016-10-04. Almost two decades ago the fall of the Santer Commission against a background of allegations of maladministration and nepotism had the effect of placing accountability on the political agenda of the EU institutions. More recently the non-ratification of the Constitutional Treaty, the difficulties of the ratification of the Lisbon Treaty and the current financial crisis have increased the calls for accountability in the EU. This book investigates whether any progress towards more accountability and transparency has been made in the post Lisbon era by taking a holistic approach to the subject. Marios Costa argues that currently the EU institutions and the Member States are not in a position to hold the so-called independent agencies as well as the various committees and expert groups accountable. Despite recent progress the EU still needs to put forward an acceptable constitutional framework which will truly secure accountability at the EU level of governance.

Simulators for Transportation Human Factors Mark S. Young, Michael G. Lenné, 2017-07-06. Simulation continues to be a growth area in transportation human factors. From empirical studies in the laboratory to the latest training techniques in the field, simulators offer myriad benefits for the experimenter and the practitioner. This book draws together current trends in research and training simulators for the road, rail, air and sea sectors to inform the reader how to maximize both validity and cost effectiveness in each case. *Simulators for Transportation Human Factors* provides a valuable resource.

for both researchers and practitioners in transportation human factors on the use of simulators giving readers concrete examples and case studies of how simulators have been developed and used in empirical research as well as training applications It offers useful and usable information on the functional requirements of simulators without the need for any background knowledge on the technical aspects focusing on the state of the art of research and applications in transport simulators rather than the state of the art of simulation technology The book covers simulators in operational terms instead of task simulation modelling and provides a useful balance between a bottom up academic approach and a top down practical perspective

Automated Low-Altitude Air Delivery Johann C. Dauer, 2021-11-02 This book investigates Unmanned Aircraft Systems UAS with a payload capacity of one metric ton for transportation The authors provide a large variety of perspectives from economics to technical realization With the focus on such heavy lift cargo UAS the authors consider recently established methods for approval and certification which they expect to be disruptive for unmanned aviation In particular the Specific Operations Risk Assessment SORA and its impact on the presented technological solutions and operational concepts are studied Starting with the assumption of an operation over sparsely populated areas and below common air traffic diverse measures to further reduce operational risks are proposed Operational concepts derived from logistics use cases set the context for an in depth analysis including aircraft and system design safe autonomy as well as airspace integration and datalinks Results from simulations and technology demonstrations are presented as a proof of concept for solutions proposed in this book

Comparative Administrative Law Susan Rose-Ackerman, Peter L.
