Foundations of Probabilistic Logic Programming Fabrizio Riguzzi, 2023-07-07 Since its birth the field of Probabilistic Logic Programming has seen a steady increase of activity with many proposals for languages and algorithms for inference and learning This book aims at providing an overview of the field with a special emphasis on languages under the Distribution Semantics one of the most influential approaches The book presents the main ideas for semantics inference and learning and highlights connections between the methods Many examples of the book include a link to a page of the web application <http://cplint.eu> where the code can be run online This 2nd edition aims at reporting the most exciting novelties in the field since the publication of the 1st edition The semantics for hybrid programs with function symbols was placed on a sound footing Probabilistic Answer Set Programming gained a lot of interest together with the studies on the complexity of inference Algorithms for solving the MPE and MAP tasks are now available Inference for hybrid programs has changed dramatically with the introduction of Weighted Model Integration With respect to learning the first approaches for neuro symbolic integration have appeared together with algorithms for learning the structure for hybrid programs Moreover given the cost of learning PLPs various works proposed language restrictions to speed up learning and improve its scaling

Temperature Calculation in Fire Safety Engineering Ulf Wickström, 2016-05-25 This book provides a consistent scientific background to engineering calculation methods applicable to analyses of materials reaction to fire as well as fire resistance of structures Several new and unique formulas and diagrams which facilitate calculations are presented It focuses on problems involving high temperature conditions and in particular defines boundary conditions in a suitable way for calculations A large portion of the book is devoted to boundary conditions and measurements of thermal exposure by radiation and convection The concepts and theories of adiabatic surface temperature and measurements of temperature with plate thermometers are thoroughly explained Also presented is a renewed method for modeling compartment fires with the resulting simple and accurate prediction tools for both pre and post flashover fires The final chapters deal with temperature calculations in steel concrete and timber structures exposed to standard time temperature fire curves Useful temperature calculation tools are included and several examples demonstrate how the finite element code TASEF can be used to calculate temperature in various configurations Temperature Calculation in Fire Safety Engineering is intended for researchers students teachers and consultants in fire safety engineering It is also suitable for others interested in analyzing and understanding fire fire dynamics and temperature development Review questions and exercises are provided for instructor use

Declarative Logic Programming Michael Kifer, Yanhong Annie Liu, 2018-09-19 The idea of this book grew out of a symposium that was held at Stony Brook in September 2012 in celebration of David S Warren s fundamental contributions to Computer Science and the area of Logic Programming in particular Logic Programming LP is at the nexus of Knowledge Representation Artificial Intelligence Mathematical Logic Databases and

Programming Languages It is fascinating and intellectually stimulating due to the fundamental interplay among theory systems and applications brought about by logic Logic programs are more declarative in the sense that they strive to be logical specifications of what to do rather than how to do it and thus they are high level and easier to understand and maintain Yet without being given an actual algorithm LP systems implement the logical specifications automatically Several books cover the basics of LP but focus mostly on the Prolog language with its incomplete control strategy and non logical features At the same time there is generally a lack of accessible yet comprehensive collections of articles covering the key aspects in declarative LP These aspects include among others well founded vs stable model semantics for negation constraints object oriented LP updates probabilistic LP and evaluation methods including top down vs bottom up and tabling For systems the situation is even less satisfactory lacking accessible literature that can help train the new crop of developers practitioners and researchers There are a few guides on Warren s Abstract Machine WAM which underlies most implementations of Prolog but very little exists on what is needed for constructing a state of the art declarative LP inference engine Contrast this with the literature on say Compilers where one can first study a book on the general principles and algorithms and then dive in the particulars of a specific compiler Such resources greatly facilitate the ability to start making meaningful contributions quickly There is also a dearth of articles about systems that support truly declarative languages especially those that tie into first order logic mathematical programming and constraint solving LP helps solve challenging problems in a wide range of application areas but in depth analysis of their connection with LP language abstractions and LP implementation methods is lacking Also rare are surveys of challenging application areas of LP such as Bioinformatics Natural Language Processing Verification and Planning The goal of this book is to help fill in the previously mentioned void in the LP literature It offers a number of overviews on key aspects of LP that are suitable for researchers and practitioners as well as graduate students The following chapters in theory systems and applications of LP are included
