Pereira, Yehoshua Sagiv, Peter J. Stuckey, 2003-06-26 These are the proceedings of the First International Conference on Computational Logic CL 2000 which was held at Imperial College in London from 24th to 28th July 2000 The theme of the conference covered all aspects of the theory implementation and application of computational logic where computational logic is to be understood broadly as the use of logic in computer science The conference was collocated with the following events 6th International Conference on Rules and Objects in Databases DOOD 2000 10th International Workshop on Logic based Program Synthesis and Transformation LOPSTR 2000 10th International Conference on Inductive Logic Programming ILP 2000 CL 2000 consisted of seven streams Program Development LOPSTR 2000 Logic Programming Theory and Extensions Constraints Automated Deduction Putting Theory into Practice Knowledge Representation and Non monotonic Reasoning Database Systems DOOD 2000 Logic Programming Implementations and Applications The LOPSTR 2000 workshop constituted the program development stream and the DOOD 2000 conference constituted the database systems stream Each stream had its own chair and program committee which autonomously selected the papers in the area of the stream Overall 176 papers were submitted of which 86 were selected to be presented at the conference and appear in these proceedings The acceptance rate was uniform across the streams In addition LOPSTR 2000 accepted about 15 extended abstracts to be presented at the conference in the program development stream **Practical Foundations of**

Mathematics Paul Taylor, 1999-05-13 *Practical Foundations* collects the methods of construction of the objects of twentieth century mathematics. Although it is mainly concerned with a framework essentially equivalent to intuitionistic Zermelo Fraenkel logic, the book looks forward to more subtle bases in categorical type theory and the machine representation of mathematics. Each idea is illustrated by wide ranging examples and followed critically along its natural path transcending disciplinary boundaries between universal algebra, type theory, category theory, set theory, sheaf theory, topology and programming. Students and teachers of computing, mathematics and philosophy will find this book both readable and of lasting value as a reference work.

Mathematics of Program Construction Graham Hutton, 2019-10-19 This book constitutes the refereed proceedings of the 13th International Conference on Mathematics of Program Construction MPC 2019 held in Porto Portugal in October 2019. The 15 revised full papers presented together with an invited paper were carefully reviewed and selected from 22 submissions. The papers deal with mathematical principles and techniques for constructing computer programs. They range from algorithmics to support for program construction in programming languages and systems. Some typical areas are type systems, program analysis and transformation, programming language semantics, security and program logics.

Relational Methods in Computer Science Wendy MacCaull, Michael Winter, Ivo Düntsch, 2006-04-18 This volume is the post conference proceedings of the 8th International Seminar on Relational Methods in Computer Science RelMiCS 8 held in conjunction with the 3rd International Workshop on Applications of Kleene Algebra and a COST Action 274 TARSKI Workshop. This combined meeting took place in St Catharines Ontario Canada from February 22 to February 26 2005.

Logic and Information Flow Jan Eijck, Albert Visser, 1994 The logic of information flow has applications in both computer science and natural language processing and is a growing area within mathematical and philosophical logic.

Foundation of Software Science and Computation Structures Jerzy Tiuryn, 2003-06-26 ETAPS2000 was the third instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprised the conferences FOSSACS, FASE, ESOP, CC, TACAS, and satellite workshops CBS, CMCS, CoFI, GRATRA, INT, seven invited lectures, a panel discussion and ten tutorials. The events that comprise ETAPS address various aspects of the system development process including specification, design, implementation, analysis and improvement. The languages, methodologies and tools which support these activities are all well within its scope. The recent blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other. Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive. ETAPS is a loose confederation in which each event retains its own identity with a separate program committee and independent proceedings. Its format is open ended allowing it to grow and evolve as time goes by. Contributed talks and system demonstrations are in synchronized parallel sessions with invited lectures in plenary sessions.

Two of the invited lectures are reserved for u fying talks on topics of interest to the whole range of ETAPS attendees
