Advances in Molecular Toxicology ,2015-11-05 Advances in Molecular Toxicology features the latest advances in the subspecialties of the broad area of molecular toxicology This series details the study of the molecular basis of toxicology by which a vast array of agents encountered in the human environment and produced by the human body manifest themselves as toxins The book is not strictly limited to documenting these examples but also covers the complex web of chemical and biological events that give rise to toxin induced symptoms and disease The new technologies that are being harnessed to analyze and understand these events will also be reviewed by leading workers in the field Provides cutting edge reviews by leading workers in the discipline Includes in depth dissection of the molecular aspects of interest to a broad range of scientists physicians and any student in the allied disciplines Presents leading edge applications of technological innovations in chemistry biochemistry and molecular medicine

The Plant Cell Cycle and Its Interfaces Dennis Francis,2001 The Plant Cell Cycle and Its Interfaces is a timely review of what is known and what we need to know about important plant cell cycle interfaces Only through proper understanding can we underpin the manipulation of crop plants and in turn provide the vital resources for an ever increasing human population Written by contributors from leading laboratories around the world the book addresses fundamental questions about plant growth and development such as how plant growth regulators regulate the cell cycle how nutrients drive the cell cycle and how homeotic genes interface with the cell cycle at these key transition points

Molecular Regulation of Nuclear Events in Mitosis and Meiosis Robert A. Schlegel,Margaret S. Halleck,Potu N. Rao,2013-09-24 Molecular Regulation of Nuclear Events in Mitosis and Meiosis presents papers from researchers in various fields engaged in the scientific study of molecular mechanisms involved in the control of nuclear events in meiotic and mitotic cell activity Various articles in the book discuss a wide range of topics such as the development of cytoplasmic activities that control chromosome cycles during maturation of amphibian oocytes dynamics of the nuclear lamina during mitosis and meiosis role of protein phosphorylation in xenopus oocyte meiotic maturation and cell cycle studies of histone modifications Molecular and cell biologists oncologists and biochemists will find the book invaluable

Cloning Stephen D. Fairbanks,2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to

stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes **Progress in Cell Cycle Research S.**

Sirsat, Mr. S. B. Patil,2025-01-10 Carbon sequestration plays a vital role in mitigating climate change by capturing and storing carbon dioxide CO₂ from the atmosphere thereby reducing greenhouse gas emissions This study provides a comprehensive overview of carbon sequestration highlighting its significance strategies and potential environmental benefits The study outlined the importance of carbon sequestration as a solution to the growing challenge of global warming It emphasizes the need to address rising CO₂ levels and the detrimental impacts of climate change on ecosystems human health and the economy Various carbon sequestration strategies employed across different sectors It discusses natural carbon sinks such as forests wetlands and agricultural lands which effectively absorb CO₂ through photosynthesis and store it in vegetation and soils *Substance P and Neurokinins* Rejean Couture,James L. Henry,A. Claudia Cuello,Georges

Pelletier,Remi Quirion,Domenico Regoli,2012-12-06 Sarajevo was the site of the first international meeting on substance P It was held in 1961 thirty years after the first report of the discovery of substance P by Von Euler and Gaddum The proceedings which follow are from a symposium held twenty five years after the first meeting These twenty five years have seen a vast expansion in this field of research This family of peptides now includes a number of different mammalian and non mammalian related peptides Beyond the early physiological and pharmacological studies there is important new information coming from the full spectrum of disciplines in the basic medical sciences including molecular biology which has given us important

insights into the biosynthetic mechanisms of origin of these peptides Montreal was chosen as the site for the 1986 meeting The name given to it was Substance P Neurokinins Montreal 86 This name was modelled after the one held in Dublin in 1982 but neurokinins were added to acknowledge the broader family of peptides The meeting was held as a Satellite Symposium of the XXX International Congress of the International Union of Physiological Sciences in Vancouver The venue was McGill University and the dates were 21-23 July 1986

Morphogenesis and Maturation of Retroviruses Hans-Georg Kräusslich, 2012-12-06 Retroviruses arguably belong to the most fascinating of all viruses because of their unusual and highly efficient mode of replication involving reverse transcription and integration of the viral genome and a complex system of transcriptional and post transcriptional regulatory mechanisms The importance of retroviruses as human and animal pathogens has also enhanced scientific and medical interest in this diverse group of viruses and has spurred an intensive search for novel and improved antiviral agents More recently analysis of retroviral replication and in particular understanding the formation and composition of the virus particle has received additional attention because of the promise of retroviral vectors as vehicles for human somatic gene therapy Many recent advances have been made in our understanding of the molecular mechanisms governing assembly and release of infectious retrovirus particles This book attempts to summarize these recent developments and to provide an overview of our current knowledge on retrovirus particle formation The individual chapters of the book deal with specific steps in the pathway of retroviral morphogenesis and maturation starting at the time when the components of the virus have been synthesized within the infected cell and ending once the infectious virion has been released from the cell An introductory chapter provides a comparative description of the structure and morphology of various retroviruses

Transporters and Pumps in Plant Signaling Markus Geisler, Kees Venema, 2010-10-17 Due to their sessile lifestyle plants need to efficiently adapt to changing environmental conditions during their life cycle Nutrient acquisition from the soil has to be able to adapt to considerable fluctuations in concentrations to ensure adequate distribution between tissues cells and organelles The storage and retrieval of nutrients metabolites or toxic substances in vacuoles plays an important part in cellular homeostasis in plants The long range transport and maintenance of turgor is critically dependent on the availability of water and rate of evaporation while at the same time photosynthetic products have to be transported to all plant parts As a result plants contain a large number of ATP dependent pumps and secondary

transporters that in order to adapt to the changing environment need to be regulated by a complex network of sensing and signaling mechanisms Plants share many basic elements of signal transduction with animals but also contain plant specific signaling molecules and mechanisms In this volume the role of transporters and pumps in the regulation of movement long range transport and compartmentalization of water solutes nutrients and classical signaling molecules is highlighted and the function regulation and membrane transporter interaction and their roles in plant signaling controlling plant physiology and development are discussed

Nuclear Receptors Chris M. Bunce, Moray J. Campbell, 2010-03-11 In 1890 a case of myxedema was treated in Lisbon by the implantation of a sheep thyroid gland with the immediate improvement in the patient's condition A few years later medications for the then ill explained condition of the menopause included tablets made from cow ovaries In the first quarter of the 20th century the identification of vitamin D and its sunlight driven production in skin paved the way to the elimination of rickets as a major medical problem Twenty years or so later Sir Vincent Wigglesworth established the endocrine basis of developmental moulting in insects arguably the most commonly performed animal behaviour on Planet Earth A paradigm that would unify these disparate observations arose between 1985 and 1987 beginning with the identification of the glucocorticoid receptor and the nuclear receptor super family What follows is a timely and positive manifestation of the capacity productivity and value of international human scientific endeavour Based on intrigue lively competition and cooperation a global effort has rapidly fostered a school of biology with widespread ramifications for the understanding of metazoan animals the human condition and the state of the planet This book is the first this century to try and capture the spirit of this endeavour to depict where the field is now and to identify some of the challenges and opportunities for the future
