Cracking the AP Chemistry Exam, 2012 Edition Paul Foglino, 2011-08-02 Provides techniques for achieving high scores on the AP chemistry exam and includes two full length practice tests *Johnstone Triangle* Norman Reid, 2021-01-18 Chemistry is often seen as a difficult subject to understand This book focusses on the triangle model that Alex H Johnstone developed in the early 1980s Originally conceived in the context of making chemistry more accessible to a wider range of learners the model has been applied in almost every area of education in chemistry at all stages of learning In looking at why chemistry is difficult there are two central questions Firstly does the problem relate to the nature of chemistry and secondly does it relate to the way humans gain understanding Both were found to be important and the answers to the two question were found to be connected The triangle model arose from sustained research into human learning The central finding from research is the critical role of working memory and the model rationalises so much evidence from chemistry education research as well as the repeated experiences of teachers of chemistry at all levels In order to understand chemistry it is essential to develop sound mental models of molecular reality It generates major implications for the way a chemistry curriculum should be constructed and the processes of teaching and learning in chemistry when the goal is focussed on understanding the key ideas Some of these implications are developed and pointers offered to more successful ways forward The power of the Johnstone Triangle lies in the way it offers clear directions for all involved in chemistry education It is hoped that this book will prove helpful to all involved in sharing the exciting story of the way humans have come to understand the molecular world one of the great examples of great human endeavour *The Last Beach* Orrin H. Pilkey, J. Andrew G. Cooper, 2014-11-21 The Last Beach is an urgent call to save the world s beaches while there is still time The geologists Orrin H Pilkey and J Andrew G Cooper sound the alarm in this frank assessment of our current relationship with beaches and their grim future if we do not change the way we understand and treat our irreplaceable shores Combining case studies and anecdotes from around the world they argue that many of the world s developed beaches including some in Florida and in Spain are virtually doomed and that we must act immediately to save imperiled beaches After explaining beaches as dynamic ecosystems Pilkey and Cooper assess the harm done by dense oceanfront development accompanied by the construction of massive seawalls to protect new buildings from a shoreline that encroaches as sea levels rise They discuss the toll taken by sand mining trash that washes up on beaches and pollution which has contaminated not only the water but also surprisingly the sand Acknowledging the challenge of reconciling our actions with our love of beaches the geologists offer suggestions for reversing course insisting that given the space beaches can take care of themselves and provide us with multiple benefits Macrophage-Activating Factors—Advances in Research and Application: 2012 Edition , 2012-12-26 Macrophage Activating Factors Advances in Research and Application 2012 Edition is a ScholarlyBrief that delivers timely authoritative comprehensive and specialized information about Macrophage Activating Factors in a concise format The
