Innovative Control Systems for Tracked Vehicle Platforms Aleksander. M Nawrat. M, 2014-02-13 This book has been motivated by an urgent need for designing and implementation of innovative control algorithms and systems for tracked vehicles Nowadays the unmanned vehicles are becoming more and more common Therefore there is a need for innovative mechanical constructions capable of adapting to various applications regardless the ground air or water underwater environment There are multiple various activities connected with tracked vehicles They can be distributed among three main groups design and control algorithms sensoric and vision based in formation construction and testing mechanical parts of unmanned vehicles Scientists and researchers involved in mechanics control algorithms image processing computer vision data fusion or IC will find this book useful

The Emerging Domain of Cooperating Objects Pedro José Marron, Stamatis Karnouskos, Daniel Minder, Aníbal Ollero, 2011-01-19 There are a number of different system concepts that have gained much relevance in the area of embedded systems over the past couple of years First there is the classic concept of embedded systems where the focus is on control systems for physical processes Secondly the notion of pervasive computing has evolved where the vision foresees everyday objects having some form of computation capacity and in most cases sensing and communication facilities Thirdly the notion of wireless sensor networks has arisen where small computing devices are able to sense their environment and cooperate in order to achieve a well defined goal These three types of quite diverse systems share a lot of commonalities on the one hand and on the other hand have some complementary aspects in common that make a combination of these systems into a coherent system vision promising In particular the important notions of control heterogeneity wireless communication dynamic and ad hoc nature and cost are prevalent to various degrees in each of these systems A future system concept needs to combine the strong points of all three system concepts in at least these functional aspects It has to provide support for the control of physical processes like today s embedded systems do have as good support for device heterogeneity and spontaneity of usage as required by pervasive and ubiquitous computing approaches and has to be as cost efficient and wirelessly agile as wireless sensor networks are These new systems consist therefore of individual entities or objects that jointly strive to reach a common goal which will typically be a goal in sensing or control and are dynamically and loosely federating themselves for cooperation taking care not to overtax their available resources This book presents a roadmap to these concepts which are summarized as cooperating objects

Intelligence in Services and Networks. Paving the Way for an Open Service Market Han Zuidweg, Mario Campolargo, Jaime Delgado, Al Mullery, 2008-01-03 Paving the Way for an Open Service Market We live in an age when powerful communications technology is becoming available to everyone From our home we can send and receive not only analogue voice but also growing volumes of digital information and even intelligence in the form of agents We are becoming

increasingly mobile and are expecting the same level of connectivity in the home in the office and on the road The regulatory and commercial environment in which we communicate is changing The telecommunications market is becoming increasingly competitive The Internet is erasing the borders between information technology and telecommunications And the way we do business is ever more dominated by electronic exchanges of information Is our technology ready for the open market of networks and services Can we manage the growing complexity of computing and telecommunications technology and place it at the service of the people The challenge for the research community is to develop the tools and techniques that will ultimately bring the full power of communications and information to everyone in a way that everyone can easily use The Sixth International Conference on Intelligence in Services and Networks IS N 99 is all about technology for paving the way to the open services market Since the first IS N conference in 1992 the focus of the IS N program has continually shifted We see existing technologies maturing while new ones emerge but the bottom line has always been putting technology at the service of the people
