

Oracle 8i User Guide for CS2312

Carole Goble

1. Introduction

Oracle is a relational database management system that uses SQL as its data manipulation language. Information on SQL is given separately to these notes. These notes are a fast-start to the way we will use Oracle in the labs and supplement the *SQL*Plus User's Guide and Reference manual* available on the web.

The Oracle database resides on a server. This is where the binaries are and your databases. Your database tables DO NOT reside in your own file store and can only be accessed by using an Oracle tool. When you log onto a machine and start an Oracle tool the server must be notified to serve the tool to your machine. This can be slow. However, once the tool is loaded onto the client it runs the program locally so this is faster. Once you have started a tool don't close it down unless you are finished.

You will be developing your database implementations in pairs. To avoid confusion and wasted disk space do not create multiple tables with the same things in them. There should only be *one* team database, looked after by *one* person and the other should be granted permission to use that database (see later on how to do that).

2. Oracle

2.1 Oracle Architecture

Oracle, very simplistically, can be viewed as having a nested architecture (figure 1)

Figure 1: Basic architecture of Oracle

2.1.1 The Kernel

The internal code that communicates with the database, and handles all the facilities of DBMS: retrieval, recovery etc. It also optimises request execution to be more efficient, and deals with the accelerators and physical data storage exploiting the facilities of the host operating system, which in our case is Unix.
