 Mumenthaler,H. Willenegger,R. Schneider,S. Steinemann,F. Straumann,B. G. Weber,2012-12-06 It is to the great and lasting
 credit of LORENZ BOHLER and his school that they have in the last decade developed and demonstrated so thoroughly the
 techniques for the conservative management of fractures Nevertheless there have always been many including some from
 BOHLER S school who have found considerable place for surgical management and with the significant progress in general

surgery seen in postwar years a new stimulus has been given to this part of traumatic surgery especially since bone injuries have become more complex and frequent The concept of internal fixation is not new The serious criticisms that have been levelled at it retain today their basic significance Progress in the fields of asepsis corrosion free metal implants operative experience and postoperative care has diminished the dangers but has not relieved the surgeon of responsibility The Association for the Study of the Problems of Internal Fixation AO has devoted itself over a number of years to the basic principles and best methods of open treatment of fractures by means of extended clinical and scientific studies in order to determine in each individual case the most promising line of treatment At the same time a well designed and tested instrument set has been developed with precise instructions for the appropriate techniques As a result the new observations about primary bone healing which have emerged from the practice of rigid internal fixation are as interesting as the uses to which they can be put in allowing early mobilization
