Application Development for IBM CICS Web Services O'Grady James, Ian Burnett, Jim Harrison, San Yong Liu, Xue Yong Zhang, IBM Redbooks, 2015-01-27. This IBM Redbooks publication focuses on developing Web service applications in IBM CICS. It takes the broad view of developing and modernizing CICS applications for XML Web services, SOAP and SOA support and lays out a reference architecture for developing these kinds of applications. We start by discussing Web services in general, then review how CICS implements Web services. We offer an overview of different development approaches: bottom up, top down, and meet in the middle. We then look at how you would go about exposing a CICS application as a Web service provider, again looking at the different approaches. The book then steps through the process of creating a CICS Web service requester. We follow this by looking at CICS application aggregation, including 3270 applications with IBM Rational Application Developer for IBM System z, and how to implement CICS Web Services using CICS Cloud technology. The first part is concluded with hints and tips to help you when implementing this technology. Part two of this publication provides performance figures for a basic Web service. We investigate some common variables and examine their effects on the performance of CICS as both a requester and provider of Web services.
