Autonomics Development: A Domain-Specific Aspect Language Approach Paul Soule,2010-06-30 Distributed applications are difficult to write as programmers need to adhere to specific distributed systems programming conventions and frameworks which makes distributed systems development complex and error prone and ties the resultant application to the distributed system because the application s code is tangled with the crosscutting concern distribution This

book introduces the concept of a domain specific aspect language called a Distribution Definition Language that generalises the distribution and distribution recovery concerns by describing the classes and methods of an existing application to be made remote the distributed system to use to make them remote and the recovery mechanism to use in the event of an error A software tool in the form of the RemoteJ compiler generator that uses information contained in the Distribution Definition Language to generate the recovery and distributed system specific code and apply it to the application using bytecode manipulation and generation techniques is introduced By allowing distribution and autonomic features such as recovery to be modularised and applied to existing applications this approach greatly simplifies distributed systems and autonomics development This book is of particular interest to researchers and students of distributed systems autonomics domain specific aspect languages and aspect orientation *Modeling with Rules Using Semantic Knowledge Engineering* Grzegorz J. Nalepa, 2017-10-04 This book proposes a consistent methodology for building intelligent systems It puts forward several formal models for designing and implementing rules based systems and presents illustrative case studies of their applications These include software engineering business process systems Semantic Web and context aware systems on mobile devices Rules offer an intuitive yet powerful method for representing human knowledge and intelligent systems based on rules have many important applications However their practical development requires proper techniques and models a gap that this book effectively addresses Transactions on Computational Collective Intelligence XI Ngoc Thanh Nguyen, 2013-10-09 These transactions publish research in computer based methods of computational collective intelligence CCI and their applications in a wide range of fields such as the semantic web social networks and multi agent systems TCCI strives to cover new methodological theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals artificial and or natural The application of multiple computational intelligence technologies such as fuzzy systems evolutionary computation neural systems consensus theory etc aims to support human and other collective intelligence and to create new forms of CCI in natural and or artificial systems This eleventh issue contains 9 carefully selected and thoroughly revised contributions
