A Comparative Political Ecology of Exurbia Laura E. Taylor, Patrick T. Hurley, 2016-05-26 This book is about politics and planning outside of cities where urban political economy and planning theories do not account for the resilience of places that are no longer rural and where local communities work hard to keep from ever becoming urban By examining exurbia as a type of place that is no longer simply rural or only tied to the economies of global resources e g mining forestry and agriculture we explore how changing landscapes are planned and designed not to be urban that is to look function and feel different from cities and suburbs in spite of new home development and real estate speculation The book's authors contend that exurbia is defined by the persistence of rural economies the conservation of rural character and protection of natural ecological systems all of which are critical components of the contentious local politics that seek to limit growth Comparative political ecology is used as an organizing concept throughout the book to describe the nature of exurban areas in the U S and Australia although exurbs are common to many countries The essays each describe distinctive case studies with each chapter using the key concepts of competing rural capitalisms and uneven environmental management to describe the politics of exurban change This systematic analysis makes the processes of exurban change easier to see and understand Based on these case studies seven characteristics of exurban places are identified rural character access local economic change ideologies of nature changes in land management coalition building and land use planning This book will be of interest to those who study planning conservation and land development issues especially in areas of high natural amenity or environmental value There is no political ecology book quite like this neither one solely focused on cases from the developed world in this case the United States and Australia nor one that specifically harnesses different case studies from multiple areas to develop a central organizing perspective of landscape change

The Political Ecology of Climate Change

Adaptation Marcus Taylor, 2014-11-17 This book provides the first systematic critique of the concept of climate change adaptation within the field of international development Drawing on a reworked political ecology framework it argues that climate is not something out there that we adapt to Instead it is part of the social and biophysical forces through which our lived environments are actively yet unevenly produced From this original foundation the book challenges us to rethink the concepts of climate change vulnerability resilience and adaptive capacity in transformed ways With case studies drawn from Pakistan India and Mongolia it demonstrates concretely how climatic change emerges as a dynamic force in the ongoing transformation of contested rural landscapes In crafting this synthesis the book recalibrates the frameworks we use to envisage climatic change in the context of contemporary debates over development livelihoods and poverty With its unique theoretical contribution and case study material this book will appeal to researchers and students in environmental studies
