Slick Policy Teresa Sabol Spezio,2018-05-11 In January 1969 the blowout on an offshore oil platform off the coast of Santa Barbara California and the resulting oil spill proved to be a transformative event in pollution control and the nascent environmental activism movement It accelerated the advancement of federal government policies and would change the way the federal government managed environmental pollution Over the next three years Congress worked to pass laws such as the National Environmental Policy Act and the Clean Water Act and revolutionized the way that the United States dealt with environmental pollution At the same time scientists developed methods to detect chemical pollution that had been

discharged into rivers and streams by industrial facilities Slick Policy presents an original and in depth history of the 1969 Santa Barbara spill Teresa Sabol Spezio provides a background of water pollution control government oversight of federally funded projects and chemical detection methods in place prior to the spill She then shows how scientists and politicians used public outrage over the spill to implement wide ranging changes to federal environmental and science policy and demonstrates the advancements to offshore oil drilling pollution technology and water protection law that resulted from these actions

Science and Technology of Thermal Barrier Coatings Yeon-Gil Jung,2021-03-05 TBC materials in the hot components of a gas turbine are exposed to extremely harsh environments Therefore the evaluation of various environmental factors in applying new TBCs is essential Understanding the mechanisms for degradation which occur in comprehensive environments plays an important role in preventing it and improving the lifetime performance The development of novel coating techniques can also have a significant impact on lifetime performance as they can alter the microstructure of the coating and alter the various properties resulting from it This Special Issue presents an original research paper that reports the development of novel TBCs particularly the application of advanced deposition techniques and novel materials

Reducing the Use of Highly Enriched Uranium in Civilian Research Reactors National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Nuclear and Radiation Studies Board,Committee on the Current Status of and Progress Toward Eliminating Highly Enriched Uranium Use in Fuel for Civilian Research and Test Reactors,2016-03-12 The continued presence of highly enriched uranium HEU in civilian installations such as research reactors poses a threat to national and international security Minimization and ultimately elimination of HEU in civilian research reactors worldwide has been a goal of U S policy and programs since 1978 Today 74

civilian research reactors around the world including 8 in the United States use or are planning to use HEU fuel Since the last National Academies of Sciences Engineering and Medicine report on this topic in 2009 28 reactors have been either shut down or converted from HEU to low enriched uranium fuel Despite this progress the large number of remaining HEU fueled reactors demonstrates that an HEU minimization program continues to be needed on a worldwide scale Reducing the Use of Highly Enriched Uranium in Civilian Research Reactors assesses the status of and progress toward eliminating the worldwide use of HEU fuel in civilian research and test reactors

Plutonium Frank von Hippel, Masafumi Takubo, Jungmin Kang, 2019-12-23 This book provides a readable and thought provoking analysis of the issues surrounding nuclear fuel reprocessing and fast neutron reactors including discussion of resources economics radiological risk and resistance to nuclear proliferation It describes the history and science behind reprocessing and gives an overview of the status of reprocessing programmes around the world It concludes that such programs should be discontinued While nuclear power is seen by many as the only realistic solution to the carbon emission problem some national nuclear establishments have been pursuing development and deployment of sodium cooled plutonium breeder reactors and plutonium recycling Its proponents argue that this system would offer significant advantages relative to current light water reactor technology in terms of greater uranium utilization efficiency and that separating out the long lived plutonium and other transuranics from spent fuel and fissioning them in fast reactors would greatly reduce the duration of the toxicity of radioactive waste However the history of efforts to deploy this system commercially in a number of countries over the last six decades has been one of economic and technical failure and in some cases was used to mask clandestine nuclear weapon development programs Covering topics of significant public interest including nuclear safety fuel storage environmental impact and the spectre of nuclear terrorism this book presents a comprehensive analysis of the issue for nuclear engineers policy analysts government officials and the general public Frank von Hippel Jungmin Kang and Masafumi Takubo three internationally renowned nuclear experts have done a valuable service to the global community in putting together this book which both historically and comprehensively covers the plutonium age as we know it today They articulate in a succinct and clear manner their views on the dangers of a plutonium economy and advocate a ban on the separation of plutonium for use in the civilian fuel cycle in view of the high proliferation and nuclear security risks and lack of economic justification Mohamed ElBaradei Director General International Atomic Energy Agency 1997 2009 Nobel Peace Prize 2005 The 1960s dream of a plutonium economy has not delivered abundant low cost energy but instead has left the world a radioactive legacy of nuclear weapons proliferation and the real potential for nuclear terrorism Kang Takubo and von Hippel explain with power and clarity what can be done to reduce these dangers The governments of the remaining countries whose nuclear research and development establishments are still pursuing the plutonium dream should pay attention Senator Edward Markey a leader in the US nuclear disarmament movement as a member of Congress since 1976 The authors have done an invaluable service by putting

together in one place the most coherent analysis of the risks associated with plutonium and the most compelling argument for ending the practice of separating plutonium from spent fuel for any purpose They have given us an easily accessible history of the evolution of thinking about the nuclear fuel cycle the current realities of nuclear power around the world and arguably most important a clear alternative path to deal with the spent fuel arising from nuclear reactors for decades to centuries to come Robert Gallucci Chief US negotiator with North Korea 1994 Dean Georgetown University School of Foreign Service 1996 2009 President MacArthur Foundation 2009 2014 **Infants, Children, and Adolescents** Laura E. Berk, 2022-07-26 A best selling chronologically organized child development text Laura E Berk s Infants Children and Adolescents takes an integrated approach to presenting development in the physical cognitive emotional and social domains emphasizing the complex interchanges between heredity and environment providing exceptional multicultural and cross cultural focus and offering research based practical applications that students can relate to their personal and professional lives **Government Reports Announcements** ,1966
