Alejandro Perez-Fidalgo, 2023-11-06 Epithelial ovarian cancer EOC is the most lethal gynecological disorder due to a lack of effective early detection strategies Worldwide approximately 230 000 women are diagnosed annually whereas 150 000 die It represents the seventh most commonly diagnosed cancer among women in the world with 5 year survival rate of 46% More

than one fifth of EOC have been related to hereditary conditions. Considerable efforts have been made to implement screening of the general population to diagnose EOC early; nevertheless, this has been ineffective and there is no approved strategy. Nowadays, new approaches for early diagnosis and prevention based on molecular genomics are in development. Whole genome sequencing has established the potency of the somatic genome characterised with diverse DNA repair deficiencies that can be used to stratify EOCs into distinct biological groups with predictive signatures of resistance or relapse. The incorporation of next generation sequencing (NGS) into clinical practice remains challenging for two reasons. Firstly, the EOC risk is not clear for some of the included genes and secondly, the variant of uncertain significance rates increase as more genes are analyzed. Finally, beyond germline pathogenic variants, somatic mutations may also affect therapeutic choices and as such, upfront tumor sequencing may be equally important to NGS, particularly as we continue to challenge treatment paradigms in the first line management of EOC.

Advances in Epithelial Ovarian Cancer: Model Systems, Microenvironmental Influences, Therapy, and Origins Viive Maarika Howell, Ben Davidson, TIAN-Li WANG, Christina Annunziata, 2016-02-03. This eBook provides a compendium of the current state of the art in research tools for and understanding of the critical research areas in epithelial ovarian cancer (EOC) with a strong emphasis on high-grade serous ovarian cancer (HG SOC). Research areas covered include therapy response and development, microenvironmental influences, and the etiology and progression of EOC. Ten articles detail established and novel in vivo and in vitro model systems. These include primary and immortalized cell culture in 2D and 3D as well as genetically engineered transgenic spontaneous syngeneic classical xenograft and patient derived xenograft mouse models. The generation of genetically engineered mouse models of HG SOC has been a major dilemma as models with the oncogenic aberrations common in the human malignancy do not accurately recapitulate HG SOC. Conversely, commonly used HG SOC cell lines have been found to not harbor the expected genetic changes. These issues, as well as the rapid acceptance of patient derived xenograft models, are reviewed. Five articles discuss different aspects of the tumor microenvironment including its role in therapy resistance, disease progression, and metastasis. Mutation of BRCA1/2 continues to be the best defined risk factor for HG SOC. Three articles discuss BRCA loss in the context of disease development, targeted therapies, and changes in preventative measures proposed for mutation carriers in light of the recent advances in knowledge regarding the origins of this malignancy. An image of HG SOC with reduced BRCA1 expression is featured on the cover image by VM Howell. A major clinical issue for patients with HG SOC is the development of therapy resistance. Five articles focus on therapy resistance and different ways to overcome resistance. Overall, this eBook is an outstanding resource to aid researchers design their programs of research and determine the most appropriate and up to date EOC model systems to address their research questions.
