

Chapter 11 & 12 Study Guide: Motion & Forces Answer Key

Chapter 11: Motion

1. Define (include the formula and circle diagram for calculating speed, velocity, and acceleration):
 - a. Distance: The length between two objects or the length of the path traveled.
 - b. Speed: distance traveled by the time it took to travel. $\text{speed} = \text{distance}/\text{time}$
 - c. Velocity: distance traveled by the time it took to travel and the direction that you traveled in. $\text{velocity} = \text{distance}/\text{time}$
 - d. Acceleration: change in velocity or velocity over time. $\text{acceleration} = \frac{\text{velocity}_{\text{final}} - \text{velocity}_{\text{initial}}}{\text{time}}$
2. What is the speed of an object at rest? 0 m/s
3. The difference between speed and velocity is that velocity includes direction.
4. The SI unit for distance is meter (m).
5. The SI unit for speed or velocity is meter per second (m/s).
6. The SI unit for acceleration is meter per second squared (m/s²).
7. On a **distance-time** graph, what does the slope tell you? Speed or Velocity
8. On a **speed-time** graph, what does the slope tell you? Acceleration

Chapter 12: Forces

9. Describe (what does it say and what is it commonly called)
 - a. Newton's First law of Motion: Also known as "Law of Inertia". Object in motion stays in motion and an object at rest stays at rest UNLESS acted upon by a NET FORCE.
 - b. Newton's Second law of Motion: $F = m \times a$. Force equals the product of an object's mass and acceleration. (Acceleration is equal to the force and inversely proportional to mass)
 - c. Newton's Third law of Motion: Also known as "Action/Reaction Law". For every action there is an equal and opposite reaction.
10. Give an example for each of Newton's laws.
 - a. Newton's First law of Motion: boulder won't move unless something pushes on it, and the moon won't stop rotating unless a force acts on it.
 - b. Newton's Second law of Motion it takes more force to accelerate a school bus than a toy car.
 - c. Newton's Third law of Motion: my foot pushed on the ball (action force), the ball pushes back (reaction force) and fly's forward (resulting net force). OR when you sit in the desk you push down on the desk and the desk pushes on you but they are balanced so there is NO CHANGE in motion.
11. Define and give an example of each of the following terms.

Definition	Example
a. Friction: force that opposes motion.	a. Friction: heat when rubbing hands together.
b. Static Friction: friction that prevents object from moving.	b. Static Friction: pushing against a dresser that won't move.
c. Sliding Friction: friction that occurs between objects sliding past each other.	c. Sliding Friction: going down a slide; dresser sliding across the floor.
d. Rolling Friction: friction that occurs between object rolling against another object.	d. Rolling Friction: roller skates on pavement; car driving on the road
e. Fluid Friction: friction that occurs in a fluid (Examples of Fluid: water, quicksand, air.)	e. Fluid Friction: falling leaves; fish swimming in water

D'Alonzo,2013-03-09 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states requiring
extensive knowledge and clinical acumen are commonly found Caring for critically ill patients requires an extensive
knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions
Because this knowledge base crosses many different disciplines introduction to caring for the intensive care patient while
exciting may also be intimidating This textbook is designed toward making the dynamic environment of the critical care unit
understandable and the approach to the patient both logical and successful The book contains three components 1
description of the procedural tasks commonly performed for the critically ill patient 2 explanation of the most common
pathophysiologic states encountered and 3 description of specific disease entities with details of their differential diagnosis
diagnostic strategy and therapeutic plan This book also uses several educational approaches that we have found useful in our
own teaching sessions and prior textbooks Clinical cases introduce chapters and highlight chapter segments to emphasize
clinical relevancy As an additional study aid margin notes highlight important teaching points and facilitate easy review of
chapter content To consolidate the principles outlined in each chapter review questions with full text explanations are pro-
vided at the end of each chapter All these elements help reinforce the most important messages for the reader *What Are*
They Thinking? Page Keeley ,2014-04-01 Children are continually developing ideas and explanations about their natural
world Some of these ideas are consistent with the science children are taught others differ significantly from scientific
explanations Many of these ideas will follow students into adulthood if they remain hidden from the teacher and unresolved
The challenge for teachers is to find ways to elicit these ideas and then use appropriate strategies to move students learning
forward Page Keeley author of the bestselling NSTA Press series *Uncovering Student Ideas in Science* You don't have to
become a mind reader to understand the ideas young students bring to science class This collection will help you draw out
and then recognize what students know or think they know about the natural world *What Are They Thinking* is a compendium
of 30 Formative Assessment Probes columns from NSTA's elementary journal *Science and Children* Each chapter provides A
sample formative assessment probe a set of interesting questions that root out commonly held often mistaken ideas Geared
to elementary students probe topics range from why you can see the Moon in the daytime to where water goes when it
evaporates to what is or isn't a rock Your students answers to each probe will help you take a step back and figure out how to
guide them from where they are conceptually to where they need to be Accompanying teacher notes easy to grasp

explanations and advice that tell you how to encourage evidence based discussion and then monitor students understanding
A bonus feature a set of study group questions written especially for this compendium by award winning author Page Keeley
So forget about acquiring psychic powers Instead turn to What Are They Thinking to transform both your teaching and your
students learning about science
