

Physical Science 101 - Kinematically Weighting

Proposed:

We want your input on the principle that we propose to use in a new weighting system.

Background:

Because of the nature of the data, we are using a weighting system that is not a simple average. We are using a weighting system that is not a simple average.

Proposed:

1. The data is a set of three values:

A set of three values, independent of the data.

These values:

We will provide the data to the students and the data will be used in the data set.

2. The data is a set of three values: A set of three values, independent of the data. We will provide the data to the students and the data will be used in the data set.

The difference is $\frac{\text{actual value} - \text{predicted value}}{\text{actual value}}$ or 100%.

3. The data is a set of three values: A set of three values, independent of the data.

4. The data is a set of three values: A set of three values, independent of the data. We will provide the data to the students and the data will be used in the data set.

5. The data is a set of three values: A set of three values, independent of the data. We will provide the data to the students and the data will be used in the data set.
