New York State Grade 4 Elementary-Level Science

Test Joyce Thornton Barry, Kathleen Cahill, 2007-08-01 This brand new manual prepares fourth grade students in New York State to do well on the required Elementary Level Science Test The book presents four study units The Living Environment The Physical Sciences Process Skills and Performance Assessment The Living Environment unit covers plants animals genetics health topics ecology and humans in their environment The Physical Sciences unit introduces students to the basics of matter energy magnetism gravity simple machines astronomy and earth science Process Skills introduces children to the concept of scientific method and tools and reviews measuring processes such as graphing and analyzing data The Performance Assessment unit deals with scientific activities appropriate to the fourth grade level The authors include practice and review questions with answers and two model tests with answers and explanations *Resources in Education*, 1998 Physical Science, Grades 4 - 6 Armstrong, 2009-02-16 Connect students in grades 4 6 with science using Physical Science Daily Skill Builders This 96 page book features two short reproducible activities per page and includes enough lessons for an entire school year It covers topics such as simple machines and alternative energy sources understanding the behavior and uses of electricity and framing scientific questions and recognizing scientific evidence Activities allow for differentiated instruction and can be used as warm ups homework assignments and extra practice The book supports National Geography Standards *Elementary Science Course of Study for Grades Four, Five and Six* Baltimore City Public Schools, 1929 **A Series of Social Science Tests for Factual Information of Ninth Grade Junior High School Pupils of Milwaukee** Henry George Speerbrecher, 1928 **Motivating Persistence in the Face of Failure** Catherine Chi Chase, 2011 Failure often presents a valuable learning opportunity however students may need motivational scaffolds to protect them from the negative psychological ramifications of failure This work explored the effectiveness of a motivation based intervention called an ego protective buffer EPB that was designed to enhance persistence after failure An ego protective buffer EPB maintains a stable sense of competence by lessening the impact of failure on one s psyche The specific instantiation of an EPB tested here was designed to elicit a combination of internal and external attributions for failure External attributions protect one s sense of competence by averting the blame for failure away from the self while internal attributions encourage students to take some responsibility for remedying the failure situation Based on this theory we embedded an EPB into the rule structure of a computer based genetics game and unleashed it on 143 seventh graders In the EPB condition students were told that winning in the game was a probabilistic outcome dependent on a combination of chance and skill on the part of the students In the Control condition students were told that winning in the game was a deterministic outcome dependent on students skill only Students played the game during two class periods Measures include pre and posttests motivational survey measures and in game behaviors The EPB did have an effect on learning but only amongst high failing students High failing EPB students learned just as much as their low failing counterparts This was not so in the Control condition where high failing students learned far less than their low failing counterparts So the high failing

EPB group was behaving as if they were buffered from the effects of failure We also found evidence of a possible mechanism behind this learning effect In the high failing EPB condition students were equally likely to persist after success and failure while in the Control condition students were far more likely to persist after success exhibiting risk averse behaviors This difference was more exaggerated in a within subjects comparison contrasting the same individuals in situations of high and low failure Finally persistence after failure was associated with learning across the full sample of subjects Regardless of condition or failure rate students who persisted more after failure also learned more This study together with the author's related body of work provides compelling evidence that an EPB is a viable intervention for encouraging persistence in the face of failure
